1 Source Code

Below is our source code for the R.O.S.E.S. project. We have broken up the sections by each file on the web site, having the source code from that file.

1.1 main.css

```
/* CSS Document */

/*
Styling for the body of the document
*/
body {
    background-color: #7891a7;
    text-align:center;
    font-size:20px;
    color:#FFF;
}

/*
Styling for the main container of the page. All content is
withing this div, including header and footer divs.
*/
#container {
    background-color: #355268;
    min-height:550px;
    width:984px;
    margin: 0 auto;
    text-align:left;
    border: 1px solid #102333;
    padding-bottom:10px;
    clear:both;
}

/*
Styling for the main content of the page. All content is
within this div except header and footer.
*/
#content {
    width:964px;
    margin: 0 auto;
```

```
        padding:10px;
    }

/*
Styling for the banner of page. The image, banner5.png,
was left as a .png to allow user to modify if desired.
*/
#banner {
    background-image:url(..../images/banner5.png);
    background-repeat:no-repeat;
    width:985px;
    height:75px;
    padding:0;
    margin:0;
}

/*
Styling for the main menu of page.
NOTE: If you change this, please realize
you may want to change the make_header($page, $num)
function in includes.php
*/
#main_menu {
    width:969px;
    background-color:#102333;
    margin:0px;
    padding-bottom:0px;
    padding-left:15px;
}

/*
Styling for links in the main menu div
*/
#main_menu a {
    padding: 0px;
    margin: 0px;
    border: none;
}

/*
Styling for the main menu of page.
NOTE: If you change this, please realize
you may want to change the make_header($page, $num)
function in includes.php
*/
```

```
#sub_menu {
    width:969px;
    background-color:#465862;
    margin:0px;
    border:0px;
    padding-top:0px;
    padding-left:15px;
}

/*
Styling for the footer of page.
*/
#footer {
    background-color:#102333;
    width:986px;
    padding-top:20px;
    padding-bottom:20px;
    margin:0px auto;
}

/*
Styling for all links on a page.
*/
a {
    text-decoration:none;
    color:#BBB284;
}

/*
Styling for all hover over links on a page.
*/
a:hover {
    color:#F9E997;
}

/*
Styling for all headers (h1) on a page.
*/
h1 {
    text-align:center;
}

/*
Styling for all text on a page.
*/
p {
```

```
        font-size:16px;
    }

/* Styling for all pre tags in a page. */
pre {
    font-size:14px;
}

/* Home Page CSS */

/*
Container for the content on the home page.
*/
#home {
    width:100%;
    float:left;
    margin:15px;
    padding-bottom:10px;
    clear:both;
}

/*
Container for the software engineering image on home page.
*/
#home_img {
    float:left;
    width:400px;
    padding-top:150px;
    padding-left:70px;
}

/*
Container for content on home page.
*/
#home_content {
    float:right;
    width:450px;
    padding-right:10px;
}

/*
Styling for all imgs in the home_content div.
*/
#home_content img {
    margin-left:120px;
}
```

```
/*
Styling for the current teams on home page.
*/
#current_teams {
    margin-left:auto;
    margin-right:auto;
}

/* Soft Eng. I */

/*
Container for content in SE I page.
*/
#eng1_content {
    float:left;
    padding:15px;
}

/* Styling for Calendars, Speakers, and Killer Robot tables */

/*
Formatting for content of calendar pages.
*/
#calendar {
    margin-left:auto;
    margin-right:auto;
    width:900px;
    height:500px;
    font-size:16px;
    text-align:left;
    overflow-y:scroll;
}

/*
Formatting for calendar menu of calendar pages.
*/
.calendar_menu {
    margin-left:auto;
    margin-right:auto;
    width:80%;
    width:900px;
    text-align:center;
    padding:10px;
}
```

```
/*
Styling for calendar tables
*/
.se_table {
    width:90%;
}

/*
Styling for calendar tables content
*/
.se_table p, blockquote, a, em, strong, ul, li {
    text-align:left;
}

/*
Styling for calendar tables row data
*/
.se_table td {
    padding:10px;
    text-align:left;
}

/* Results - Individual */

/*
#indiv_pic {
    float:left;
    height:300px;
    padding:15px;
    clear:both;
}
#indiv_pic img {
    width:175px;
}
#indiv_content {
    float:right;
    width:300px;
    height:400px;
}
#indiv_content img {
    width:300px;
}

#team {
    width:450px;
```

```
        height:300px;
    }

#robot {
    text-align:center;
}

#speakers {
    font-size:18px;
}
 */

/*
Formatting for content in a result page.
*/
#table_results {
    margin-left:auto;
    margin-right:auto;
}

/*
Styling for content of result page headers.
*/
#table_results th {

<h1>Software Engineering I - Grading</h1>
<strong>COURSE GRADING FOR THE FALL 2010 SEMESTER</strong>
<p>50% Exams (Midterm: 25%, Final: 25%)</p>
<p><span>50% Project (10%, 20%, 20%)<br />
</span>The project portion of the grade will have three components: </p>
<ul>
<li>1. Project Grades -- which are based on:
<ul>
<li>a) Results </li>
<li>b) Documentation </li>
<li>c) Demonstration of mastery of course concepts </li>
<li>d) Team website </li>
</ul>
</li>
<li>2. Individual Time-Logs -- a record of the time YOU worked on the project</li>
<li>3. Rating Grades (done after each phase and at the end of the semester), Which includes:
<ul>
<li>a) Ratings of group members by Group Leaders </li>
<li>b) Ratings of group members/leaders by Instructor </li>
<li>c) Peer Evaluations -- your personal assessment of the distribution of project work over
your team</li>
</ul>
</li>
</ul>
<p>(not graded in Fall 2009) Presentations:</p>
<ul>
<li>Your level of understanding of what you presented</li>
<li>The quality of the material you present</li>
```

The quality of your presentation-style

<p>Grade Deductions: One point will be subtracted from the final grade for each time an assignment is completed late, or, not completed properly:</p>

Resume review by Career Center (twice)
Carry out a Career Center mock interview
(6 components)

 Cover Letter
 Resume
 References
 Preparation for the interview

 Seriousness in role-playing during the interview
 Interaction during the interview

Send a thank-you note to the mock interviewer
Submit team evaluations on-time (three times)
Submit work-log on-time and in the correct format (three times)

<p>CLASS ATTENDANCE:</p>

<p>Attendance at class meetings and team meetings is required (this includes any team meetings and class meetings held during class time and outside of class time). Up to three absences will be allowed. Each absence above three (for any reasons) will lower the final grade by 1/3 of a letter grade. <u>Being late for a class or a meeting is considered being absent.</u> In order to properly contribute to your group's effort, software-engineering concepts and the details of your project must be well understood by all members of each team.</p>

<p>TIME-LOG OF ACTIVITIES:</p>

<p>Each student must keep a log of his/her project work. The log should be kept on your Siena or Computer Science "personal drive". The log must be up-to-date and available for the instructor to read at any time. The team leader will keep track of class attendance, team-meeting attendance, and attendance at other scheduled meetings.</p>

<p>Each entry should include the date, time-worked, details of work attempted and work completed, and any comments such as difficulties encountered, extraordinary successes, etc. Make an entry, however brief, whenever you work on the project. Logs will be collected at the end of each semester.</p>

<p>All logs will be submitted to the professor as part of each evaluation (see below) - the logs are an accumulative record of the time you have worked. Your log must be printed properly : one-page wide, with title/headings on each page, and with a summation of total hours at the bottom. The log will be cumulative and submitted to the instructor at three times during the semester.</p>

<p align="left">Samples of: Individual Log Sheets and Team Leader Attendance Sheets.</p>

<p align="left">RATINGS - PEER EVALUATIONS:</p>

<p align="left">The purpose of the rating sheets is to measure an individual's contribution to the group effort. The rating form is not time-consuming to fill out. Each team member will rate all other team members. Two rates will be given: amount of work done by each individual; and, how well an individual carried out what she/he was asked to do. Ratings will be turned in at the next class after a presentation. A semester rating will also be done. The instructor will rate the group members and leaders, guided by the team's performance and members' evaluations. All ratings will be factored in as a percentage of the final grade.

</p>

<p>1. Team leaders will rate the efforts of each member of the team.</p>

<p> - Designate the % of total effort done by each member</p>

<p> - Designate the quality of each member's effort relative to what each was assigned</p>

<p>2. Team members will rate all members of the team (a rating sheet is in your teams folder at this link) </p>

<p> - Designate the % of total effort done by each member</p>

<p> - Designate the quality of each member's effort relative to what each was assigned</p>

<p> - Evaluate the team leader</p>

<?

1.9 grade2.php

```
<?
/*
 * Grading page for Software Engineering II
 */
include ("includes.php");
make_header("Software Engineering II");
main_menu("Grading II", 2);
?>
<h1>Software Engineering II - Grading</h1>
<strong>GRADING</strong><br>
<span> There is no midterm or final exam in this course </span></h3>
</blockquote>
<ul>
  <li>30% Class participation (in discussions and in walk-throughs) and required material submitted on time.</li>
  <li>70% Project
    <ul>
      <li>Detailed Design 30%</li>
      <li>Acceptance Test 40%</li>
    </ul>
  </li>
  <li>Attendance (class, team, client meetings, or required outside of class activity) - absent or being late for up to 3 events/hours is allowed; any additional absences or tardiness will result in a 1/3 letter-grade deduction per hour/absence/tardiness</li>
</ul>
<p>The following three elements will be taken into account in the computation of the Project portion of the final grade:</p>
<ol>
  <li> Team Grade on the Project (assigned by the instructor). The team grade is based on the documents provided, the presentations, the quality of the work performed, and demonstration of mastery of the course content - 60% of the project grade</li>
  <li> Individual Logs (submitted on-time and confirmed by the team leader): an accounting of hours worked on the team project. Each student will keep a log of work on the project. The log should include the date, amount of time spent, brief description of the activity or the work attempted and completed, and any comment or notes that might be important (such as difficulties encountered, surprises, problems, or successes). Make an entry, however short, whenever you work on the project. LOGS WILL BE SUBMITTED TWO TIMES DURING THE SEMESTER. THE LOG IS ALSO USEFUL SHOULD YOU QUESTION THE GRADE YOU RECEIVE FOR THE COURSE. These items are expected to be submitted - if any are not submitted or are submitted late, the Project Grade will be reduced. This measure will be 20% of
```

the project grade. Each member's hours will be compared to the average hours worked by each member's team. The average hours will be equivalent to a B+ grade.

Team Leader and Peer Evaluations - 20% of Project grade

- Each member's contribution to completing the project

- Was the member's work completed in a timely fashion

- The quality of the work performed

/** JavaScript function to figure out the date and go to the nearest date
 * function goToDate1():
 *
 * creates a javascript date object called d. Then makes an array of months based on the index
of the array to
 * correspond to the name of the month.
 *
 * Makes a variable day to get the day value of the date object d.
 *
 * Then it checks if the day part of the date (var day) is single digit, if so, add a leading 0 to it.
 *
 * Creates a variable Value that adds the month value and day value together, then does
redirect
 * to the anchor link with that date.
 *
 *
 * fucntion Calendar (form):
 *
 * This function gets the values from the form on the calendar pages and 1. checks if the value
is
 * in the range of the semester, and 2. directs to the date on the calendar if within the range of
the semester.
 *
 * First gets the values of the form.
 *
 * Then it gets the numeric value of the month by making array of months and checking the
value of the array with the
 * given the value and storing the index.
 *
 * Then sets a date object with the .setMonth method, using the given month and day from the
form.
 *
 * Set the date objects for begin and end variables (begin/end of semester), and compares these
date objects with one another,
 * giving an alert if not within the range, if within, redirects to date.

```

```

*
* !!! NOTE !!! YOU MUST CHANGE THE begin AND end VARIABLES EACH YEAR

<h1>Software Engineering II - Speakers</h1>

<p><strong>Throughout the Spring semester, Siena College Computer Science Alumni and
other professionals are scheduled to make presentations about how their organizations develop
software. The speakers provide information on how they employ different models for Software
Engineering, with emphasis on requirements, design, and testing. Speakers discuss techniques,
policies, and procedures that are followed at their organization (or that are not being followed,
or that have been followed but are no longer deployed). In addition, the speakers discuss their
career paths, their continued education (graduate courses, graduate degrees, training courses,
and professional certifications), and how they balance their personal and private
lives.</strong></p>
<p>All presentations are in Roger Bacon 328, and they start at 6:00 pm, and they last about an
hour.</p>
<!-- Executes the cal_dropdown function in the includes.php file, to make drop down menu of
dates -->

<h1>Software Engineering I - Syllabus</h1>
<strong>COURSE SYLLABUS FOR THE FALL 2010 SEMESTER</strong>
<p><strong>Dr. Timoth Lederman<br />
Office Hours: Wednesday, & Friday 9:30 am - 12:00 noon<br />
And, by appointment (made at least 24 hours in advance via email or phone)</strong></p>
<p><strong>Office: Roger Bacon 326<br />
Phone: 783-4197<br />

email: <a href="mailto:lederman@siena.edu">lederman@siena.edu</a></strong></p>
<p><strong>This syllabus gives an overview of the course (with some information about the second semester, CSIS-415), including information on projects, schedules, teams, grading, and other matters. I update and revise this syllabus throughout the semester. Please keep this link for a reference throughout the entire year.</strong></p>
<p><strong>PROJECTS: (CSIS-410 and CSIS-415)</strong></p>
<p><strong>Two projects will be presented and discussed in class during the first class of the semester. A brief and terse description of the projects will be provided by the prospective clients on the first day of class. </strong></p>
<p><em><strong>1. Dr. Robert Yoder, Associate Professor (and Department Head) of Computer Science, Siena College</strong></em><br />
Produce a weekly display of classroom usage for the Computer Science Department. This should provide displays by room and by faculty and as a composite for all rooms and faculty.
</p>

<p><em><strong>3. Dr. Timoth Lederman, Professor of Computer Science</strong></em><br />
Produce a better set of webpages for the information provided on the Siena College Software Engineering websites. This undertaking will include correcting all former teams' websites so that their web-page-addressing is relative.</p>
<p><strong>During the first week, teams will be selected. The teams will remain the same during the entire semester</strong></p>
<p><strong>The projects will be carried over into the second semester.</strong></p>
```

<p>Team leaders will be elected for the first semester. At the beginning of the second semester, teams might be reorganized and the instructor will select new team leader(s).</p>
<p> </p>

<p>WORK BREAKDOWN BY SEMESTER</p>
<p>First Semester:</p>
<p>- Group formation – choose team leaders and team members (4 to 6 people per team) </p>
<p>- Choose "middle management" (or, at least a librarian and systems administrator)</p>
<p>- Each group will complete a Software Plan (Problem Definition & Project Plan)</p>

<p>- Each group will complete a Software Specification (Requirements Specification)</p>
<p>- Each group will complete a revised (and improved) Software Specification</p>
<p>- Each group will complete a Preliminary Design</p>
<p>Second Semester:</p>
<p>- Re-group or keep the same groups - this decision will be made between semesters by the instructor.</p>
<p>- Each group will complete a Detailed Design & Test Design
(These include more design-based inventories for testing)</p>

<p>- Each group will Code and Unit Test their implementation (their "product")</p>
<p>- Each group will Integration Test their implementation</p>
<p>- Each group will System Test their implementation</p>
<p>- Each group will deliver a finished (and tested) product</p>
<p>- In class</p>
<p> - At the Academic Celebration in late April or early May</p>

<p> </p>
<p>MEETINGS:</p>
<p>Group Meetings:</p>
<p>Each group (and sub-group) should meet as necessary to accomplish the required work. It is the responsibility of the Group Leader or Sub-group Leader to call meetings at a time convenient to the group members. The Group Leader or Sub-group Leader must take attendance and keep accurate records for rating purposes. The Group Leader or Sub-group Leader may excuse a member from attendance for a valid reason (but this is still an absence).</p>
<p>Some class time will be allocated for group meetings, but this will be limited during the first semester (and more common during the second semester). During the second semester, more class time will be used for project reviews and "walk-throughs".</p>
<p>Group Leader Meetings:</p>

<p>Group Leaders will meet with the instructor once each week. The team leaders must schedule these meetings.</p>

<p> </p>

<h2>Pandemic/Emergency Preparedness </h2>

<p>(a) You are instructed to bring all texts and a copy of the syllabus/course schedule home with you in the event of a College Closure. The Academic Calendar will be adjusted upon Reopening; so be prepared for the possibility of a short mini-semester; rescheduled class/exam period; and /or rescheduling of the semester, depending on the length of the Closure.

</p>

<p>(b) If your situation permits, you should continue with readings and assignments to the best of your ability, per the course schedule. </p>

<p>(c) You will be given instructions regarding how to deal with paper assignments requiring library or other required research by me, as needed. </p>

<p>(d) Online office hours will be used by me in order to maintain contact with my students. You will be able to "check-in" with questions that you have. If you do not have internet access available, I will also provide my home phone number and home address, as needed. Remember, internet, mail delivery, and telephone services may also be impacted by a Pandemic or other emergency event. </p>

<p>JOB DESCRIPTIONS for Group Leader, Sub-group Leader, and Librarian, Webmaster/Webmistress, System Administrator

(not all teams will have all these positions filled by name/title)</p>

<p>1. Group (Team) Leader</p>

<p>Duties:</p>

</blockquote>

 Organize the group for project implementation

 Choose Sub-group Leaders and Librarian

 Schedule group meetings - Schedule project reviews at group level

 Take attendance at group meetings

 Schedule meetings with the client

 Make sure that meeting notes are taken at team meeting and client meetings

 Make sure that meetings are submitted to the client and the professor

 Attend Group Leader meetings with Instructor (once or twice a week)

 Supervise group Librarian and all group members

 Rate/evaluate team members after each phase of the semester

<blockquote>

<p>Qualifications:</p>

</blockquote>

 High academic achievement

 Good communication skills
 Self-motivated, conscientious student
 Good leadership skills

<p>2. Sub-group Leader (most likely only in the second semester)</p>

<p>Duties:</p>

 Organize sub-group for either development or testing

 Schedule sub-group meetings - Schedule reviews and walk-throughs at sub-group level

 Take attendance at sub-group meetings

 Assist Group Leader in management of group activities

 Rate sub-group members at end of semester

<p>Qualifications</p>

:High academic achievement

Good communication skills

Self-motivated, conscientious student

Good leadership skills

<blockquote>

<p>Qualifications:</p>

 High academic achievement

Good communication skills

 Self-motivated, conscientious student

 Good leadership skills

<p>3. Librarian</p>

<p>Duties:</p>

 Be responsible for all documentation related to project work, including:

Software Plan: Project Definition and Project Plan,

Software Specification,

Preliminary Design,

Detailed Design,

Acceptance Test: Source Code, Test Plan & Test Results, User's Manual

```
</ul>
<p><strong>Qualifications:</strong></p>
<ul>
<li>High academic achievement and a hard worker</li>

<li>Good organizational skills</li>
<li>Experience with website development</li>
</ul>
<p><strong>4. Webmaster/Webmistress<br />
    5. Systems Administrator</strong></p>
<p><strong>Duties:</strong></p>

<ul>
<li> It is required that all documents be prepared and saved on a Software Engineering
    workstations.</li>
<li>It is required that all documents be published on a team (class) website.</li>
<li>Each team must have at least one member who maintains team workstations' users, and
    systems and applications
    software.
<p><strong>Qualifications</strong></p>
</li>

<li>High academic achievement and a hard worker</li>
<li>Good organizational skills</li>
<li>Experience with website development</li>

<h1>Software Engineering II - Syllabus</h1>
<h2>Learning Goals <span>(highlighted items, below - taken from Computer Science
Department Learning Goals)</span></h2>
<ol>
  <ol>
    <ol>
      <li><strong>Acquire a base of knowledge, skills, and ethical perspectives in computer
science upon which a lifetime of on-going learning and professional development can be
built.</strong></li>
      <li><strong>Apply critical thinking skills and technology to defining, modeling,
analyzing, evaluating, developing, and testing solutions to computing problems. </strong></li>
      <li><strong>Communicate computing ideas with clarity and coherence to technical and
non-technical audiences through writing and speaking. </strong></li>
      <li><strong>Exhibit an awareness of some of the important problems in computer
science and the nature of computer science research. </strong></li>
      <li><strong>Develop teamwork skills necessary to produce technical solutions
collaboratively as a member of a group. </strong></li>
    </ol>
  </ol>
</ol>
<h2><strong>COURSE SYLLABUS FOR THE SPRING 2011 SEMESTER</strong></h2>
<p><strong>Instructor: Dr. Timothy C. Lederman, Roger Bacon 326<br />
  <br />
```

Office Hours:

Monday/Wednesday/Friday: 10:15 am to 11:15 am

Tuesday: 2:00-4:00 pm

and, by appointment </p>

<h3>PROJECT: Continue work on the projects from last semester (three projects; 2
teams). </h3>

<h3>WORK BREAKDOWN FOR THE SEMESTER</h3>

 Discuss the status of the development environment

 Detailed Design Specification
 Test Design
 Database schema (if needed)

 The program/system code
 Unit Tests
 Integration Tests
 A System Test
 An Acceptance Test – demonstration and test results

 Team Song - presented by the entire team

<hr />

<p>Samples of:</p>

<p> Team Leader - Attendance Sheets

Team Leader - Member Evaluation form (evaluate all members, including yourself)</p>

<p>Individual Log form</p>

<p> Individual Evaluation form (to be filled out by each member, including Team Leader):

</p>

<hr />

<h3>PROJECT LEGACY</h3>

<p>I would like you to be able to reflect upon what you have learned in the course. I also want you to have the opportunity to make suggestions about the course that you think would improve it. Therefore, you are required to submit a Project Legacy – a short 2-3 page paper – in which you write your thoughts and impression of Software Engineering in general, and of this class in particular. This paper must be turned in for you to pass Software Engineering II. I will not read this until after grades are turned in (I do this to encourage you to give honest and frank opinions of the material, of the course, and of the instruction)</p>

<h3>PANDEMIC/EMERGENCY PREPAREDNESS</h3>

<p>(a) You are instructed to bring all texts and a copy of the syllabus/course schedule home with you in the event of a College Closure. The Academic Calendar will be adjusted upon Reopening; so be prepared for the possibility of a short mini-semester; rescheduled class/exam period; and /or rescheduling of the semester, depending on the length of the Closure. </p>

<p>(b) If your situation permits, you should continue with readings and assignments to the best of your ability, per the course schedule. </p>

<p>(c) You will be given instructions regarding how to deal with paper assignments requiring library or other required research by me, as needed. </p>

<p>(d) Online office hours will be used by me in order to maintain contact with my students. You will be able to "check-in" with questions that you have. If you do not have internet access available, I will also provide my home phone number and home address, as needed. Remember, internet, mail delivery, and telephone services may also be impacted by a Pandemic or other emergency event. </p>

<p>(e) Finally, stay connected with information regarding the status of the College's status and Reopening schedule by monitoring the Siena website, www.siena.edu.</p>
