

Client Meeting #2 Notes  
9/16/2010

State of website now

- Links to years at the bottom of the website
- In order to find a certain person, Edit → Find can be used; Easier and better way would probably involve the implementation of a database

Search Function

- Enter in the search criteria, get a hit, and return the result

Multiple hits:

- Option to put in additional criteria?
- Perhaps just choose between multiple hits

Exact hit:

- A nice frame of information should come up for the person being searched

Possible improvements

1. Working videos for past teams
  - various teams' videos aren't working either because of incorrect pathnames or changes caused from the servers being switched over
2. A clearer way to go back to the home page of the website. As of now it isn't very obvious.

Constraints

1. Database done in MySQL
2. Website built to be as platform independent as possible. Should have a consistent look for different browsers, such as Firefox, Internet Explorer, Safari, etc. (Built for the recent versions would be best)
3. Designed for a screen resolution of 1024x768. Can be sensitive to computers with smaller screens

Miscellaneous

- Client does not want any mouse-over menus unless there is not enough space. In that case, the mouse-over menu system would be acceptable.
