

Client Meeting

October 11, 2013

Software Lab

3:00-3:30

Dennis, Luke, Abigail, Dr. Lim

Accounts Creation

- Best to have the administrator create accounts
- Open registration
 - Can create a gap in grade book if student never registers for class
- Course Code
 - Becomes redundant when administrators are already creating class and student accounts
 - Should still be included in Requirement Specifications

Question Pool:

- Course Coordinator maintains course pool
- Each Faculty has a question pool of their own questions
- All questions put into an assignment by faculty are automatically added to their pool
- Faculty can choose to submit questions from individual pools into larger course pool
- No global pool
- Removable questions
 - Functionality constraints to be determined
 - If faculty removes a question from the pool that is currently being used in an assignment, what happens to the assignment? The question? How to stop this problem?

An assignment contains many questions
