Client Meeting
October 17, 2013
6:00-6:10
Software Lab
Attendance: Dr. Lim, Luke Greiner, Denis Kalic, Abigail McCarthy

Showing Lim the Prototypes, and compiler

Prototypes:
- Link underneath password—make it stand out better
- Background—fine, be mindful of color pallets and textures as you go further into prototyping
- On the top of the screen—give user status
  - Makes it clearer for multi users, ie faculty member  is also a co-coordinator, make the options shown
- If they have not chosen a course assignment should not be shown, have a place holder instead until a course is clicked.

Student screen:
- Logged in and chosen a course—how would they change to a different course?
  - Idea:  go home and be presented with more courses
  - process should be easy enough and users must understand how to do it
- The other decisions—Putting the course are on the right—make it more like blackboard—easier to understand, see what looks good as a user, what is the best design?

Compiler:
  - What jolt did, since they were doing it through web—a unique session id at the beginning/end to show what you have done/changed
  - Make sure that no one logs in twice, problems with uniqueness and code readability
  - Has to be able to catch errors—Java C, python, whatever feels more comfortable using, and works
