

Client Meeting Notes

11/8/2013

3:45- 4:35

Attendance: Luke, Denis, Patrick, Dr. Lim

- Showing Dr. Lim our DFDs- mostly correct, some need adjustments
- How do you make sure questions are not duplicated in Global Pools?
 - Would be simpler to just have course pools
 - would need question id or some key to make sure questions are not duplicated

Course Coordinator: manage pool and check and delete questions so there are no duplicates, make sure questions are categorized correctly

- Remove some functionality of course coordinator in Level 2 diagram because already inherited from faculty user
- Can faculty create question by adding into question pool then adding to assignment or create question that is added right to assignment and question pool at the same time?
 - Either way is fine
- Will have 2 question pools called Private and Global
- Course coordinator should not have access to private pool
- No two questions can have same question ID in the same pool, if they are course coordinator will manually have to check and remove
- Compiler- good start as of now, next step doing test cases
- Prototypes- need to edit some slides, otherwise good

Need to figure out in the future if faculty takes question from course pool and edit it will it be uploaded to the global pool as a new question
