

Team Meeting
September 29, 2013
8-10pm
Software Lab

In attendance: Luke, Robby, Pat, Peter, Abigail

Pat and Robby worked on formatting files and pictures for website and website layout.

Luke, Peter, Abigail worked on User Narratives

Both due Monday September 30, 2013

Questions to ask at next client meeting:

- Do you want change password functionality for all users after logging in the first time?
- Does the administrator add the students into the course and then send out initial user names and passwords—do they put students into class?
 - Would it be better to create an account for all potential users and then add them to a course if they register for one?
 - Course listed already student user signs in the first time, but does not work until a key code is entered—code from admin or faculty?
 - Or having some kind of add course button, either that allows for a student to search for a course from all courses using JPREP then entering code to sign up, or by just putting in key code and being assigned to the corresponding course?
- Do you want professors to be notified when a student has registered for the course—in the same way that teachers are alerted when a student has completed a course evaluation?
- Can faculty opt out of adding their questions to the repository? Copyright purposes?
- Course Coordinator
 - Is this a separate account then a professor's faculty account?
 - Or is it an available option for all faculty accounts that can be toggled on and off by administrator when the professor is a course coordinator

Next Meeting Wednesday, October 2, 2013.

- Have detailed outlines for Requirement Specifications—group will be focusing further on this for the meeting
