

Client Meeting 1:

Designated Meeting Times:

Mondays at 1:30PM

Fridays at 11:30AM

-In the CS lounge unless otherwise noted

Details of Project:

-Dr. Lim is looking for a system to handle the issues of a programming contest software system

-He needs multiple teams to be able to connect to server(s) and allow them to upload/enter responses/file(s) onto the server – most likely .java files

-Make sure concurrency is working

-The program must include a real time scoreboard – (must be able to save scores automatically and contain contest history)

-Communication between programmers and judges should be minimal (chatroom?)

-Does not *have* to be web-based (java?)

-Should be built locally (portability of project is not an issue)

Assignment for Next Meeting:

Do background research – current software available (such as PC²); also what can be used for the chatroom/communication aspect

Set Agendas

Start brainstorming!
