Log-in Screen

The screenshot shows a dialog box titled "Connect to match.siena.edu". It features a blue header with a key icon. Below the header, the text "match.siena.edu" is displayed. There are two input fields: "User name:" with a dropdown arrow and a small person icon, and "Password:" with a standard text box. A checkbox labeled "Remember my password" is located below the password field. At the bottom, there are "OK" and "Cancel" buttons.

Administrator Screens

The screenshot shows a Microsoft Internet Explorer browser window displaying the Siena College administrator interface. The browser title is "Siena College - Let's Make a Match - Microsoft Internet Explorer - [Working Offline]". The address bar shows the path "C:\Documents and Settings\michelle\Desktop\software\adminwel.html". The page has a green background with the Siena College logo and navigation links: Home, About Siena, Academics, News, Student Life, and Search. A white rounded rectangle contains the following text:

Welcome Jay Bebb

There are Currently X number of students out of X number Total registered.
The system status is Normal.
Accounts need to be deleted in X number of days.

Paired Roommates

The screenshot shows a Microsoft Internet Explorer browser window. The address bar displays the URL: C:\Documents and Settings\michelle\Desktop\software\adminlist.html. The browser's menu bar includes File, Edit, View, Favorites, Tools, and Help. The toolbar contains icons for Back, Forward, Stop, Home, Search, Favorites, Media, and other functions. The browser's status bar shows 'Done' and 'My Computer'.

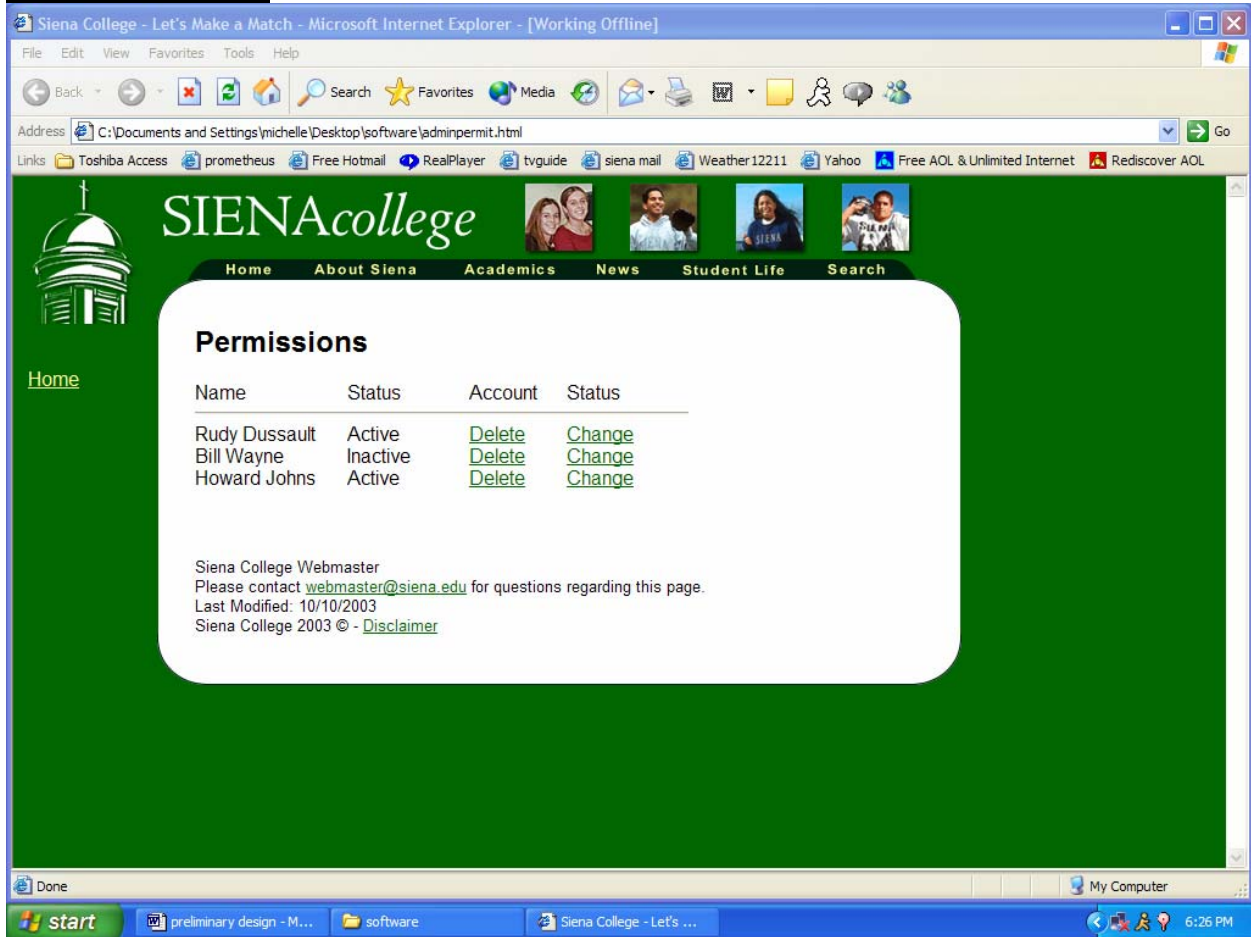

The website content is displayed on a green background. At the top left is the Siena College logo, a dome-shaped building. To its right is the text 'SIENAcollege'. Below the logo and text is a navigation menu with links: Home, About Siena, Academics, News, Student Life, and Search. Below the navigation menu is a white rounded rectangle containing the following text:

Paired Roommates

1.	Rudy Dussault	Jeremy Biggins	Freshmen
2.	Jeremy Biggins	Rudy Dussault	Freshmen
3.	John Ralph	Henry Smith	Freshmen
4.	Henry Smith	John Ralph	Freshmen

Below the table, the text reads: Siena College Webmaster. Please contact webmaster@siena.edu for questions regarding this page. Last Modified: 10/10/2003. Siena College 2003 © - [Disclaimer](#)

User command summary

Freshman Screens:

Let's Make a Match! Program Screen

This is the First screen any user sees when accessing the system. It provides the user with a brief overview of what the system is used for. It also displays some limited help to get the user started and logged in. At this screen, the user selects whether he/she is a freshmen, a returning student, or an administrator.

Log In

The housing department will supply users with a user name and password to use. Once the user is logged on the password can be changed. The user enters his/her user name and password. If a correct user name and password is supplied then the user will be brought to the General welcome screen. If the system does not recognize the user name or password then an authorization-failed page will be displayed.

Authorization-failed

This screen is used to alert the user that his/her user name or password has not been accepted. From here the user can attempt to log in again or contact the system administrator.

General Welcome Screen

This screen serves as a personalized homepage for the user. It lists statistics pertaining to how many users are in the system. Also information about your account will be listed. From this screen the user can chose to Create/Update their profile, query the other users or change their password. A space will be provided for news items, and important dates that need to be known.

Password Screen

The user is asked to enter his/her old password, and the new password twice. If the old password is correct, then the user will be alerted that his/her new password has been changed and the user will be brought to the General welcome screen. If the old password is incorrect, then the user will be alerted that they have entered invalid information and be returned to the General welcome screen

Create/Update Profile Screen

The user enters his/her first and last name as well as personal e-mail address. Optionally the user can enter other means of contact, such as home phone or mailing address. Spaces will be provided for AIM and ICQ names to be entered as well. The user can enter a question and answer that can be used to send them a new password as well. The user must answer 10-15 questions that outline their personal preferences and habits and will be used in the algorithm to select a roommate. Additionally, the user can select any number of items in a list of hobbies and sports that they are interested in. A text area will also be available for the user to put personalized information about themselves that they want known, but was not covered in the other areas. Once all required information has been entered the user can select the submit button to save his/her changes.

Query Results Screen

This screen displays the matches found by the query algorithm in a numbered list that is sorted by relevance. Each match contains some basic information about the match, such as user name, class status, and availability. The user can either select a match in the list or return to the General welcome screen.

Student Information Screen

The student information screen provides a more detailed description of a match than the Query results screen. The match's answers will be compared to users answers in a question-by-question evaluation. Similar answers will be flagged with a green marker and conflicting answers will be flagged with a red marker. The hobbies and interests selected by the match will be shown after the questions. Also any additional comments the match may have entered will be displayed at the bottom of the page. The user can contact the current match, request the match, or view the next match in the Query results screen.

Request Screen

Once the user has found a suitable roommate her/she can send a request to housing using this screen. The match's name is shown at the top, as well as whether or not the match has chosen you as a roommate. The User clicks Submit, and the request is processed by the system.

Administrative Screens:

Log In

Same as above

Administrator Welcome Screen

This screen serves as a homepage for the administrator. It will list statistics that are vital to the maintenance of the system. There are several links that take the user to the Roommate printout screen, User permissions screen and the Tasks screen.

Roommate Printout Screen

Displays a list of all roommate pairs that is sorted by date. The details of the list include roommate names, dorm preferences, and class status. This screen will have the option to be formatted for a printer as well.

User Permissions Screen

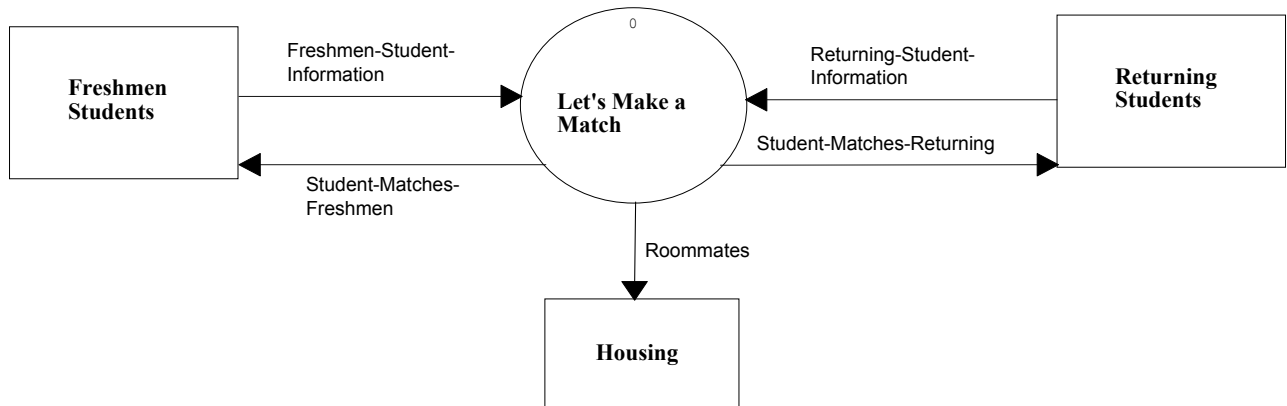

This screen will handle student accounts. The administrator can select any student and either: remove him/her, toggle availability status, or change password. A general help paragraph will explain when and why the administrator would need to change a students permissions.

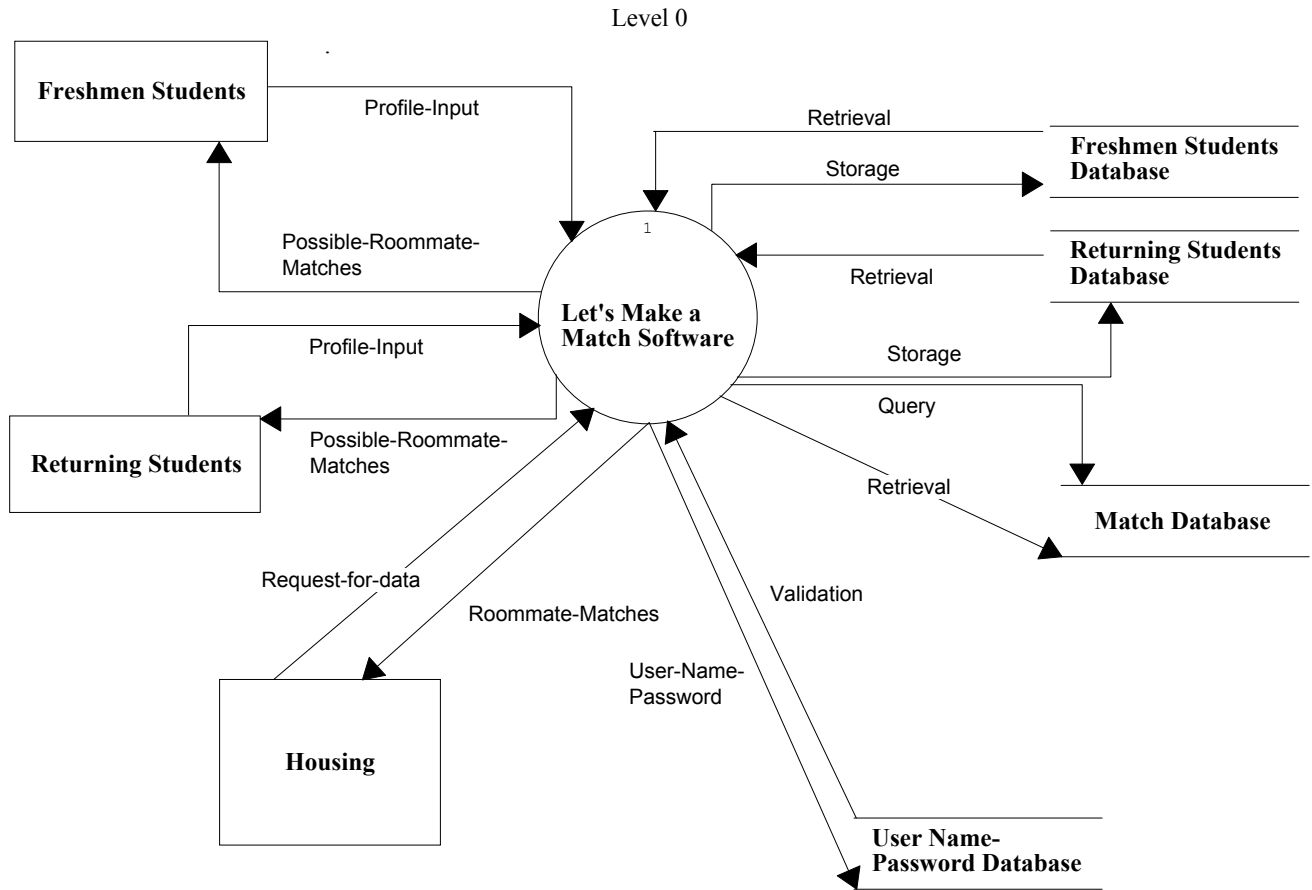

Tasks Screen

General tasks required for normal system maintenance will be handled at this screen. The administrator can reset the system or change options for the database from here. An explanation as to what each task does will also be provided to the side of any task. Once the administrator is done he/she can click the submit button and be brought back to the Administrator welcome screen.

Create New User Name and Password

Process

Description:

Prompts the user to enter a new login and password.

Process #: 1.1.1.2

Process Description:

This process takes the password that the user enters and stores it in the password database so the next time the user logs in they can use their new name.

Location:

[Process Login](#) (1.1.1)

Input Flows:

[Prompt-New-Name-Password](#)

Parameter Specifications

Student_Profiles_Table

This table will store all of the personal profile information for each student user of the system. Some of the items will be First_Name, Last_Name, Gender and email address.

Student_Password_Table

The table will store the students' passwords to the Let's Make A Match system.

Matched_Students_Table

This table will store all of the students who have been matched up together.

Functional Descriptions

- The system will have a login screen for users and administrators
- The system will have an authentication process to restrict unauthorized people
- The ability to add, update, or removed a user's information is available
- The system will supply relevant matches for the user
- Users will be able to submit their living requests to the system
- Users will receive confirmation that their request was received
- Administrators will have the ability to:
 - access reports on users' matches
 - clear out the database
 - delete a user at anytime
 - flag a user with a confirmed match
- Administrators must monitor and maintain the database on a consistent basis to ensure the system is running and working properly

Testing Requirements

Test Cases for Freshman

Freshman Test Case	Expected Result	Actual Result
Web Page	Welcome web page should be accessible using IE, Netscape or Opera browser	
Click on Freshman Login	Login screen should appear	
Login in with "username" and "password"	Should receive message that you successfully logged in to the system	
Login with "invalid_username" and "password"	Should receive error message that either the username or password is incorrect	
Login with "username" and "Invalid_password"	Should receive error message that either the username or password is incorrect	
Login with "invalid_username" and "invalid_password"	Should receive error message that either the username or password is incorrect	
Click on the "Forgot your Password" Link	Should receive a screen that will ask the user to enter their mother's maiden name	
Enter Mother's Maiden Name	Should receive message that you successfully logged in to the system	
Click on the "Create Profile" Link	A profile fields page should appear asking user to fill out.	
All profile fields should be tested with correct and incorrect data	Should except valid data and reject invalid data	
Submit Profile	Should receive a message that the profile has been successfully created	
Search for Matches	Should display Match Results "Name and Percentage"	
Click on Matched name	Should display profile comparison of you and the matched user	
Contact matched user	Should display matched users email address	
Request a Roomate	User should receive the confirmation screen	
Update your Profile	Should receive a screen with Profile fields allowing user to change or update them	

Test Cases for Administrator

Freshman Test Case	Expected Result	Actual Result
Type in URL for site home page	Hope page displays with all pictures	
Home Page	Email links works	
	Pictures Display	
	Disclaimer link works	
	All links work	
Click link on botom for administrator sign in	Administrator Logon window pops up	
Logging in		
No User Name, No password	Rejected	
No User Name, Incorrect password	Rejected	
No User Name, Correct password	Rejected

Detailed Design Specification**Physical Data Structures and Data File Specification****Account Table**

Field Name	Data Type	Description
USER ID	Text	Students username - character size 7
PASSWORD	Text	Students password - character size 12
FIRST NAME	Text	Students first name - character size 15
LAST NAME	Text	Students last name - character size 25
EMAIL	Text	Student e-mail address - character size 50
MAIDEN NAME	Text	Mother's maiden name - character size 25
MATCHED STATUS	Text	Matched - yes or no - character size 3
LAST LOGIN	Date/Time	Last time they logged in - date/time
SOCIAL SECURITY	Number	Students Social Security Number - number size 9

Matched Table

Field Name	Data Type	Description
USER ID	Text	Person requesting roommate - character size 7
USER ID1	Text	Requested roommate - character size 7
DATE	Date/Time	Date matched - date
DORM	Text	Name of Dorm - character size 50
ROOMNUM	Number	Room number - number length 10
WING	Text	Wing of Dorm - character size 50

Profile Table

Field Name	Data Type	Description
USER ID	Text	character - size 7
QUESTION1	Number	number - length 2
QUESTION2	Number	number - length 2
QUESTION3	Number	number - length 2
QUESTION4	Number	number - length 2
QUESTION5	Number	number - length 2
QUESTION6	Number	number - length 2
QUESTION7	Number	number - length 2
QUESTION8	Number	number - length 2
QUESTION9	Number	number - length 2
QUESTION10	Number	number - length 2
QUESTION11	Number	number - length 2
QUESTION12	Number	number - length 2
QUESTION13	Number	number - length 2
QUESTION14	Number	number - length 2
QUESTION15	Number	number - length 2
QUESTION16	Number	number - length 2
HOBBY1	Number	number - length 2
HOBBY2	Number	number - length 2
HOBBY3	Number	number - length 2
HOBBY4	Number	number - length 2
HOBBY5	Number	number - length 2
COMMENTS	Text	character - size 255

Student Affairs Table

Field Name	Data Type	Description
Username	Text	character - size 7
Password	Text	character - size 12

Packaging Specifications

Our software will include an instruction manual for the administrator that will include step by step instructions how to use, update, and maintain the database. There will also be instructions sent to the student on how to access and use the software when they receive confirmation of their deposit.

Appendix A: Glossary of Terms

Access: A relational database running under Microsoft Windows.

Browser - A browser is an application program that provides a way to look at and interact with all the information on the World Wide Web.

Code: A system of symbols and rules used to represent instructions to a computer.

Controlled Decentralized (CD): A software engineering team that has a defined leader who is in charge of the group, each of which has responsibility of other specific tasks. Overall we solve problems as a whole.

Database - A collection of data arranged for ease and speed of search and retrieval.

Data flow diagram - A representation of the functional decomposition of a system.

Entity-Relationship Diagram – a data modeling technique that creates a graphical representation of the entities, and the relationships between entities, within an information system.

Gantt Chart - A chart that depicts progress in relation to time, often used in planning and tracking a project.

HTML (Hypertext Markup Language): A markup language used to structure text and multimedia documents and to set up hypertext links between documents, used extensively on the World Wide Web.

Internet - An interconnected system of networks that connects computers around the world via the TCP/IP protocol.

JavaScript: A trademark used for a programming language designed to develop applications, especially ones for the Internet that can operate on different platforms.

Linear Sequential Model / Classic Waterfall Model – A systematic, sequential approach to software development that begins at the system level and progresses through analysis, design, coding, testing, and support.

Logical Data Dictionary: The dictionary identifies data and its characteristics. It is a set of descriptions that can be shared by applications, this can be a database table.

Logical Data Stores: Files/ places where the data is stored

MYSQL - Open Source Database Software

Oracle: A relational database management system that runs on most mainframe, micro,

and personal computers.

Process – An activity that changes or manipulates data.

Process Model – A software engineering strategy that is used to develop a software system.

Query – A data retrieval request.

Relational Database: A database system in which any database file can be a component of more than one of the database's tables.

Software - Written programs, procedures or rules and associated documentation pertaining to the operation of a computer system and that are stored in read/write memory.

SQL - An industry-standard language for creating, updating and, querying relational database management systems.

Use Case – Set of scenarios that show a usage of the system by a certain user.

User – An individual that has signed on to the Let's make a Match System and has been assigned a user name and password.

Visual Basic: A popular event-driven visual programming system from Microsoft Corporation for Microsoft Windows.
