

First meeting
Zack Fitzsimmons, Renee Solheim, Matt Ferritto
9/12/2011

Basic idea of Problem

Run a high school in spring and local in the winter

Teams are of any size

Need to up load files to a central server. It will hopefully then compile and run the program which will then compares and state if the teams solution correct or not.

Do not want to wait longer then an hour to see if the program has a solution.

Feedback should be sent back to the team.

Communication available, email or aim.

Score board, turned off and frozen at a certain time.

Must be portable and run on almost any system. Compile on modern machines

Possibly be able to print

Team To Do List

Meeting with Darren Friday at 4 except when colloquium

Friday have prepared Team Name and Team Titles

Hopefully we will have some of our software system set up depending on the room situation and definitely beginning of software plan.

Do the background check of other solutions out there for this problem

Do research on what the Clients have now (Eric Breimer or Vandenburg are who we should speak to, NOT DARREN)

Bob Yoder - put on his schedule to block the room

What the Client is Currently Using

Right now are using web. We do not have to do web based.

Updating and automatic is a down fall for web base

With what they have now- not reliable and bunch of different tabs “clunky”

Team’s suggestions

Automatic judging of some sort, formatting problems etc.

Pdf display of the problems (Uploaded and viewed individually)

Side Notes

JOLT 2009-2010 software engineering project Java Online Learning Tool

Prefers email so there’s a record

Our Client prefers to be addressed as Darren
