

## **Client Meeting**

Darren – Zachary, Michael, Matthew, Renee  
11/7/2011

Reserve the library for Friday – 12:30-1:30 during free period

### **Sub Screens**

#### Judging

- Should see compilation error
- Console
- Buttons - Compile, Input/Testing (test case files), Grading (display another menu, list of responses) If Grading is correct would automatically notify the Score Board Judge
- Side bar – selection of problems

#### Messaging

- Select Messages and can select responses or a general response
- Submit button

#### Score Board

- Score Board should be able to change times just in case something went wrong, for example error in the input file. Adjust for incorrect test case.
- Still good to have the Score Board Judge even though their interaction is slim.
- Should pull up edit fields

(Score Board judge has extra permissions, will see the Score Board screen differently)

### **TO DO**

Mock ups of the prototypes by Friday.
