Excel Grading System

NSG Software

Prepared by:

Justin Spegele – Team Leader & Webmaster
Kristen Dobreski – Testing Manager
Dan Lomanto – Development Manager
Matt Warner – Lead Programmer & System Admin

May 2, 2006 Excel Grading System Acceptance Test

Table of Contents:

Section 1: Introduction	1
Section 2: Functional Requirements	1-5
Section 3: Development and Production Environments	6
Section 4: Test Plan	
Section 5: Testing Documents	
Section 6: User Displays	7-57
Section 7: Gantt Chart	58
Section 8: Glossary	59-60

Section 1: Introduction

Reason for Project:

Throughout the course of the year, the Computer Science faculty conducts labs in the CSIS-010 and CSIS-011 courses that teach students how to use Microsoft Excel. Each week professors spend countless hours correcting labs when their time could be spent in a much more productive fashion. That is the reason why we are creating AEGIS, the Automatic Excel Grading and Information System. After the completion of our software, professors will be able to spend their time more wisely instead of correcting labs. Because there are different types of professors for these classes, there are different operations that each person will need to be able to do with the software.

[Table of Contents](#)

Section 2: Functional Requirements

There are four different users that will be using the software, which are the Course Coordinator, Lecture Instructor, Lab Instructor, and Student.

Course Coordinator:

The Course Coordinator needs to be able to do many things. The Course Coordinator is in charge of all the Microsoft Excel labs therefore they need to have privileges to do everything. Some of the abilities that the Course Coordinator will be able to do are:

- Add/Edit Lab Sections - **MET**
- Add/Edit Lecture Sections - **MET**
- Upload Grading Key Files - **MET**
- Specify the number of lab files that need to be handed in by each student - **MET**
- Add/Edit Students - **MET**
- Add/Edit Instructors - **MET**
- Search for Students and Instructors - **MET**
- View a Student's Grades - **MET**
- View a Lab/Lecture Section's Grades - **MET**
- Change Password - **MET**
- View lab summaries for all students - **MET**

Lab Instructor:

The Lab Instructor will have some of the same permissions as the Course Coordinator. Some of the abilities though will be made so that the Lab Instructor may only perform them for their sections of labs. A list of their abilities are:

- Change Password - **MET**
- Change a Student's Grade within their lab section - **MET**
- Search for Students - **MET**
- Edit Students in their lab sections - **MET**
- View Grades of Students - **MET**
- View lab summaries for Students - **MET**

Lecture Instructor:

The Lecture Instructor is similar to the Lab Instructor but also does not have all the same abilities as a Course Coordinator. A list of what the Lecture Instructor will be able to do is:

- Change Password - **MET**
- Change a Student's Grade within their lecture section - **MET**
- Search for Students - **MET**
- View Grades of Students - **MET**
- View lab summaries for Students - **MET**

Student:

A Student will have the most restricted abilities for obvious reasons. We do not want a student to be able to change any information about any student. Therefore the permission level for a student will be the lowest of all four users. A Student will be able to perform the following operations:

- Change Password - **MET**
- Upload appropriate lab files from their computer - **MET**
- View their Grades - **MET**
- View lab summaries - **MET**
- Change Lecture Section - **MET**
- Change Lab Section - **MET**

In addition, Students are able to register themselves with the system from a link on the login page.

In our software, there are three main parts that our clients will interact with on a regular basis, whether they realize it or not. These three parts are the parser, the database, and the interface.

Parser:

In our software project the major inner workings will consist of the parser. What the parser will be able to do is, given a correct excel spreadsheet and a student excel spreadsheet, parse out corresponding information from each spreadsheet, compare the two spreadsheets to see what the student got correct and what they also got wrong.

The way the parser works is that since it is being written in java, libraries exist that have functions that enable the picking of a particular cell or area of a spreadsheet and keep track of its characteristics in some data-type, most likely a string. The parser will do this for both the student's spreadsheet and the correct spreadsheet. When this is done the two strings are compared to see if they match. If they do match then the student's answer is correct and if it doesn't match then the answer is incorrect. Certain cell types, such as formulas and graphs, will be flagged for review by the lab instructor. - **MET**

Database:

There will also be a database in our system that will organize into tables the information of every user of the system. This includes all students in CSIS 010 and 011, and all lab and lecture instructors of those courses. The students will be separated by which lab and lecture sections they are in so that way their respective instructors may access each student's information easily. Each student will have information such as their SID numbers, lab section, lecture section, submitted labs, and grades. There are also tables to manage Sections, Labs, Key Files and Submitted Files. This database will also contain information about previous semesters as time goes on. The purpose of this is that in case something in the past needs to be checked, a faculty member may look in the database for whatever they need. - **MET**

Interface:

The system website is going to be the interface that both the students and faculty members will be interacting with on a regular basis. This system will be required to output the following grading summaries:

- Single lab for a single student. - **MET**
- All lab grades for a single student. - **MET**
- Grades for a single lab for a single section. - **NOT MET**
- Grades for all labs for a single section. - **MET**
- Single Question for a single section. - **NOT MET**
- Single Question for all sections. - **NOT MET**

Students will be able to log in and then either view their grades or submit any lab files that they may have, as long as it is not passed the designated deadline. Instructors will be able to view every student's grades and information. The Course Coordinator will be able to upload a grading key, manage all user accounts, view every student's grades like the Instructors, and any small loose ends that may be taken care of by an administrator. For each action there will be a different web-page that the user will see.

[Table of Contents](#)

Section 3: Development and Production Environments

Development Environment

- Dell dimension 4550
 - Windows XP Home Edition Service Pack 2
 - 2.4 GHz Pentium 4
 - 37 GB Hard Drive
 - 512 MB RAM
- Gateway PC
 - Windows 2000 Service Pack 3
 - 1.3 GHz Pentium 4
 - 35 GB Hard Drive
 - 654 MB RAM
- Web Server
 - Oraserv 2.4.21-4.el.
 - Apache 2.0.46
 - PHP 4.3.11
 - MySQL 4.1.14
- Our system will be tested on Internet Explorer, Firefox, Opera and AOL web browsers.

Production Environment

The manner in which we are developing our software allows for our software to be platform independent. This means that no matter what the machine a person is using, they will be able to perform all the tasks that they desire. There are only a few small requirements that our software will need on each computer.

- Any common web browser.
- Java Runtime Environment installed on the web server (tested on Java 1.4).

This is the student's "Change Sections" page. Here students have the option of changing the sections that they are currently registered for in the system. The purpose of this screen is if a student changes sections after the start of the semester or if the student accidentally registers with the wrong section. The student is also required to re-enter their password on this page in order for the changes to be entered into the database.

These are the student's upload lab pages. First the student must select a lab and click "Go." The student is then given a file upload input box for each required file for that lab. Students browse for their files and then click upload. The files are then uploaded and graded. When "Upload" is clicked the grading functions are called by the GUI, a grading summary is then generated and placed in a folder on the server for later access. This allows users to get summaries at the click of a button.

This is the student's "View Grades" page. This page generates a table listing all of the labs that the student has uploaded files for and the grades that have been recorded for those labs. As we do not have "real" labs and grading guides, we elected not to insert the grades into the database for the purposes of testing. Each grade is displayed as a link to an individual summary of what the student got wrong on that lab.

This is the Lecture Instructor's "Change Password" page. This page allows the lecture instructor to change his/her password by entering their old password, their new password, and again for confirmation purposes.

Lecture Instructor – Student Manager (Search)

The screenshot shows the AEGIS Beta 3.0 Student Manager Search interface. The page has a green header with the text "AEGIS Beta 3.0". Below the header, there is a navigation menu on the left with the following items: "Welcome Tim", "Logout", "Change Password", "Tools", "Student Manager", and "Lab Results". The main content area is titled "Student Manager : Search" and contains two buttons: "Add" and "Show All". Below this, there are two search options: "View students in your sections:" with a dropdown menu showing "CSIS 011.01" and a "Go" button; and "Search all students:" with a text input field and a "Search" button. At the bottom of the page, there is a copyright notice: "©2006 NSG Software" and a date: "Date last Modified: 05/01/2006 06:50:56".

This is the Lecture Instructor’s “Student Manager” search function. From here, the lecture instructor can choose to Add and new student, Show All existing students, Search students by their section or Search all students by either username or last name.

This is the Course Coordinator’s “Student Manager” search by section function. After the instructor chooses a section of theirs from the previous page, they are brought here, where all students registered with that section are listed. Course Coordinators are given the ability to edit and delete student accounts from this page. These pages are shown below.

This is the Course Coordinator’s “Lab Manager” search by Id function. After the coordinator searches by Lab Id on the previous page, they are brought here where information on that lab is listed out. Here again we see that the Course Coordinator is given delete privileges.

Course Coordinator – Lab Manager (Delete)

The screenshot shows the AEGIS Beta 3.0 interface. At the top, a green banner displays "AEGIS Beta 3.0". Below this, a green sidebar on the left contains navigation links under "Welcome Jami" (Logout, Change Password) and "Tools" (Student Manager, Instructor Manager, Section Manager, Lab Manager, Lab Results, Upload Grading Keys). The main content area is white and features a confirmation message: "Lab Manager : Delete" followed by "Are you sure you want to delete this section?" with "Yes" and "Cancel" buttons. Below the message is a table with the following data:

Lab Id	01103
Lab Name	011 Lab 3
Files	1

At the bottom of the page, there is a copyright notice: "©2006 NSG Software" and a date: "Date last Modified: 05/01/2006 08:26:57".

This is the Course Coordinator’s “Lab Manager” delete function. Clicking the delete button next to a lab name will bring the Course Coordinator to this confirmation page. From here, clicking “Yes” will delete the lab from the system, while “Cancel” will go back to the main Lab Manager page.

Course Coordinator – View Lab Results

The screenshot shows the AEGIS Beta 3.0 interface. At the top, a green banner displays "AEGIS Beta 3.0". Below this, the page is divided into a left sidebar and a main content area. The sidebar, also green, contains the text "Welcome Jami" followed by links for "Logout" and "Change Password". Under the heading "Tools", there are links for "Student Manager", "Instructor Manager", "Section Manager", "Lab Manager", "Lab Results", and "Upload Grading Keys". The main content area, titled "View Lab Results", features a search form with an empty text input field and a "Results by Student" button. Below this, a dropdown menu is set to "CSIS 011.01" and a "Results by Section" button is visible. At the bottom center of the page, there is a copyright notice: "©2006 NSG Software" and "Date last Modified: 05/01/2006 08:30:35".

This is the Course Coordinator’s “View Lab Results” page. Here the Course Coordinator has the option of searching for a single student (by username or last name) or by searching for an entire section. The resulting pages can be seen below.

Course Coordinator – View Results (Search by student)

The screenshot displays the AEGIS Beta 3.0 interface. At the top, a green banner reads "AEGIS Beta 3.0". Below this, a white navigation bar contains "View Lab Results" and a "Back" button. On the left, a green sidebar lists user options: "Welcome Jami", "Logout", "Change Password", and a "Tools" section with links for "Student Manager", "Instructor Manager", "Section Manager", "Lab Manager", "Lab Results", and "Upload Grading Keys". The main content area shows a table of lab results:

011 Lab 1	011 Lab 2	010 Midterm
0	0	0

At the bottom of the page, there is a copyright notice: "©2006 NSG Software" and a date: "Date last Modified: 05/01/2006 08:31:05".

This is the Course Coordinator’s “View Results” search by student function. A student’s lab grades for the semester are listed out after an instructor has searched for that particular student. Each grade is displayed as a link to an individual summary of what the student got wrong on that lab.

Section 8: Glossary

Apache Web Server – an open source web server for Unix-like systems.

Code – A set of data or symbols that represent a string of instructions to the computer.

Course Coordinator – The administrator for the Excel Grading System. Has the privileges to perform all tasks on the web interface as well as view all information.

CSIS-010 – Intro to Computer Applications. One of the Siena College courses that will be using our Excel Grading System.

CSIS-011 – Problem Solving with Spreadsheets. Another course that will be using our Excel Grading System.

Data Flow Diagram - A representation of the functional decomposition of a system. administrator will be using on the website to wither grade or submit the labs.

Database - The organization of all the labs into a structure that is simplest to the faculty members and System Administrator.

Gantt Chart - A chart that depicts progress in relation to time, often used in planning and tracking a project.

GUI – A Graphical User Interface is a method of interacting with a computer through direct manipulation of graphical images in addition to text.

HTML – In computing, 'HyperText Markup Language ' (HTML) is a markup language designed for the creation of web pages with hypertext and other information to be displayed in a web browser.

HTTP - HyperText Transfer Protocol (HTTP) is the method used to transfer or convey information on the World Wide Web. The original purpose was to provide a way to publish and receive HTML pages.

HTTPS – The https: URI scheme is a URI scheme which is equivalent and syntactically identical to the http: scheme normally used for accessing resources using HTTP. Using an https: URL indicates that HTTP is to be used, but with additional security measures applied to the transactions.

Interface – See GUI

Key – The key is something that the course coordinator uploads into the system in order for the labs submitted by the students to be corrected against. The key is a perfect copy of what the lab should look like.

Lab Instructor – The lab instructor may or may not be a lecture instructor. The lab instructor is a person who grades the lab reports.

Lab Reports - A summary of each lab that has been graded for each student who has submitted a lab.

Lecture Instructor – The lecture instructor is a person who teaches a lecture section for either CSIS-010 or CSIS-011. They have the ability to view grades through the web interface and also grade summaries.

Master Test Plan – The highest level of test plans for software testing.

NSG – Non-Commissioned Software Group.

Parser – The class of functions that will parse information out of Excel files.

PHP – PHP Hypertext Preprocessor is an open-source, reflective programming language used mainly for developing server-side applications, dynamic web content, and more recently, a broader range of software applications.

Regression Testing - The retesting of a section of code after it has been changed to fix a problem or bug.

Simulators - A computer program that attempts to simulate an abstract model of a particular system.

Student – The student, one of the four main users within the system, is a person enrolled in either CSIS-010 or CSIS-011. They have the ability to submit lab reports and view their own grades.

Test Plan Case – see Unit Test.

Test Plan Documents – Section 4.1 of this document.

UI (User Interface) – See GUI.

Unit Test - a procedure used to verify that a particular module of source code is working properly.

Use-Case – Describes how the system responds to the requests of different actors.

Waterfall Model – A model in which all relevant milestones are identified with their relationship to the development process. It demonstrates what the steps of software development are and in what order they must be completed before the next one is able to begin.
