S.E.E. Solutions
Client Meeting Notes 2
9/17/2012
Kelly Bedard, Tyler Mann, Jess Reinhardt

Start: 4:20

Registration

Registration is part of the problem, but not all.
There are paper submissions and assignment of reviewers to submissions
You can be a reviewer and not attend the conference
People who have submitted something (ex. Workshop) are allowed to review a paper
People who submit a paper cannot review papers
Will talk about exact user roles after presentations on Friday – will be part of requirement specifications
Registering to be a reviewer is different than registering for the conference
Have one registration where users check all applicable roles for them in the conference was suggested
Potentially have a verifiable e-mail address and give a registration conformation number

Major Goals

Online system users can register
Different people whom work under Dr. Lim have to be able to get quick access to all the info they need, and only the info they need, nothing extra based on user role.

Payment System

Have to figure out how to "set up" a payment system without it actually being part of paypal or something like that.
Could just do checks.
Is possible to pay at time of checking it at conference

Priorities

Registration is straightforward
Key portion is handling submissions

Misc.

Reviewed problem definition, seems to be on right track.
No specific expectations for software plan

End: 4:45
