

D&C Solution's Client Meeting with Mr. Papadopoulos, 12pm-12:30pm, Software Engineering Lab, 2/14/13

-License Scanner

Among the options left, the two teams should decide on a scanner and inform Mr. Papadopoulos

-Web Page

Focus on aesthetics (color scheme, page layout, and overall attractiveness while keeping it simplicity)

No need to worry about matching it up with Siena's current webpage layouts.

No need to worry about copyrights

-Remember Me Function

Decided to leave out for security reasons and the lack of need for this function.

-Log-In for Public Safety

Each log-in for public safety should be unique

-Guests Vehicle(s)

Database should keep track of guests' vehicles and when they come on campus with them

For online registration of guests, vehicle information should be inputted each time

-Guest Registration Emails

Public Safety Officer (the dispatcher) should receive these emails

Tab idea that displays number of registered guests should be implemented

-If Guests comes after 9pm and doesn't have paperwork, he/she will be directed to Kiernan Hall to print it out

Suggestions

- Setup a timeline (short semester) that includes milestones, estimated time to complete each goal, and key dates to be noted (e.g. presentation dates)

-Mr. Papadopoulos says it's alright to shoot him emails on ideas, to setup a time to briefly drop by to go over them(Public Safety office)
