

Client Meeting

01 April 2014

6:00 PM – 6:15 PM

Attendance:

Comments about Presentation and Document

- Changing an entity in the database
 - Changing of the primary key
 - Causing a lot of duplication
 - Possible overwrite? -> NO
 - Best way of doing is probably parent node and children node
 - Tracking statistics (important, but not that important)
 - Assuming we get everything else done
- Live prototype presentation was not completely functioning
 - NEEDS TO GET DONE.

Patrick demonstrating a few Administrator prototypes

- Manage user accounts
 - Didn't work out quite as planned
- Create new course coordinator
 - If a blank field is submitted, entries in database are still created
 - Needs to be fixed
- Create a course
 - Displaying of faculty members to assign to course
 - Course ID is the number associated with the course
- Client approves

Managing an assignment while it is live

- How do you justify changing a problem once students have submitted solutions?
- So it is easy to edit a description and remove?
- Faculty can edit grades to assignments
 - In which a faculty can create a new assignment and mark correct answers for the students who have already submitted solutions

Can I create a problem?

Can a student see the work done in a problem?
