Client Meeting
12/5/2011

Reviewed prototypes in our Preliminary Design document:
-clarification of problem: could be placed differently
-chat window is not able to be shown on every screen (scoreboard is too large)
        -possibly placed as its own tab?
        -will be decided when testing begins
-judges view messages from their own teams
        -judge also determines the right answer from the contestants
        -CACTUS will determine any errors in coding before letting submissions be submitted to judges
-Consider adding extra constraints to output
        -limiting number of characters, size of output?
-Must determine how input is put into contest system
        -what to do with multiple inputs?
        -each problem has one input file for test cases
-Time limit must be added to configure contest settings
-Manage accounts for sys admin:
        -what parts are grayed out when account type is chosen?
        -if judge has team and problem: judge responsible for problem should get submissions from all
teams
