

Client Meeting Notes 5 2/27/2011 1:30-2:00 Monday

ExoNET demonstrated to our client our database connecting to C.A.C.T.U.S.

We are using MySQL for C.A.C.T.U.S.

Net bean's allows ExoNET to keep track of what data is in the database.

We need to make sure that there is no lag to logging in when users are connected to our program.

Ways to minimize extra space is to have a credits button or instructional button for users to click on or view.

The new color scheme has been shown to our client

It would be a good idea to look at C.A.C.T.U.S. in 328 to make sure it is nicely viewable for the presentation on Thursday.
