Client Meeting Notes 4 02/2011 1:30 – 2:00pm Monday

Paul's interface critiques discussed

Ideas: Avoid extra space but avoid clutter.

Implement a help button or help interface option to minimize space.

Although we are really doing a scalability test, call the test a performance test to Dr. Lederman on the test plan

Choose a Color Scheme- Hint: Dr. Lim's favorite color is green

JOLT had a green color scheme. Check there detailed design to see what colors they used

A nice metallic scheme was an option

Color Coordination with buttons or tabs and texts in the chat window is needed when choosing colors

Chat window may be bigger for height in theory than the width. The width size is fine.

Make sure colors are distinct

Scroll Option on Scoreboard. The Bonus Jonus needs to be implemented onto the scoreboard.

Create space for the current time of the contest. Should we update time every time an event occurs or every minute?

Should we implement a popup notification for clarifications or create a tab to blink if there is a clarification.
