Client Meeting

11/11/2011

Additional prototypes made on Fireworks are shown to Dr. Lim.

- Custom 'Welcome' message
- Submissions tab for judge
    *Maybe not have this tab be the first one open at log in
    *CACTUS response to code=green: no syntax errors/ red: errors occur during compilation
- For chat window: need some indicator to show judge that a message is pending from specific teams
- For Submission page for Contestants
    *Thinking about combining History Data with List of Problems
    *Must decide how we want Contestants to choose the language
- For scoreboard
    *Maybe make chat window minimize or hidden

- For Contest Problems
    *Make sure to have a clear indicator of what problem number users are looking at
- For System Administrator 'Problem submissions'
    *Do not include selection of language
    *Make sure test case section has enough room- and it accommodates uploading of files
    *ARE we including a function that compares the answer to the test cases to the answer to the contestants code WITHIN CACTUS or using outside sources
- For SA 'Add/Drop teams'
    *just have drop button

Lim wants to know how much space we're losing with our background design.
More specific design of page layouts will be discussed.
