Client Meeting
11/28/2011

Regarding Unit tests for the Preliminary Design, Dr. Lim believes to just break down the processes.

      -Probably do not have to include a check to see if the password exists (in activity diagram)

      -Put together diagram for a more involved process (activity diagram)

      -Can use these diagrams for unit tests

      -Perhaps talk to Dr. Lederman to make sure the unit tests will be complete

      -Make sure to include something like the scoreboard in unit tests- this will include communication with database

      -Test cases should be set up similar to how our unit test is for chat window

Regarding the Deployment Diagram:

      -SFTP might have to be changed to SSH

      -Code repository is on oraserv

      -ANY machines used for development must be included in the deployment diagram: SE lab comp; Dave's comp, etc.

Dr. Lim approves of the website map at this level.

      -Good way of showing tabs

Regarding the logical data dictionary:

      -Dr. Lim is not 100% sure on what is needed- he suggests showing the dictionary to Dr. Lederman for full understanding

Refined prototype screens should be presented to Lim during our next meeting on Friday
