

Client Meeting
9/13/13
12:40 PM - 1:00 PM

Questions asked and then the responses from the client:

Q. What is the problem that you need solving?

- Needs us to trace the price of certain commodities
- Some ideas:
 - Histogram of prices
 - All prices will be found online
 - Would like to be able to intelligently figure out the right time to buy based on the prices of the items

Q. Does he have any existing tools to help him track Magic card prices right now?

- No, he does not have any existing tools

Q. Are the items to be tracked only Magic cards?

- No, could be other commodities

Q. What is the client's initial idea of the end result? (How will it be displayed?) /How should the end result be represented?

- Displayed in a web browser
- Designed like a stock price, showing the variance of the price
- Had the idea of using widgets
- Type in the name of something, show data for that item
- He will provide us with a list of websites to use

- ❖ This will be for private use
- ❖ "Hobbit" is the nickname for the project
- ❖ Be careful with the scraping of data

*** Have to figure out a client meeting time that is weekly***
