

## Client Meeting #2

September 17, 2013

S.E. Lab / 9:30 – 10:30

Attendants: Karl Appel, Connor Blakely, Jacqueline Hausmann, Dr. Lim

Purpose: To Discuss, in more detail, the Hobb-IT project and the expected/wanted outcome

### Notes:

- Is the tracker just for magic cards? Yes
- Paper or Online cards? Both? Only tracking paper cards
- Had Dr. Lim ever heard of mtg goldfish/mtg price? Not he had not, but he already had pre-determined websites
  - No amazon/ebay
- Any constraints imposed? Server, software? Client has no preference, instructor does
  - Host monster or Oraserv
  - We will have a database account for project
- Client will not be looking to sell cards, only buy
- Client will have a list of cards he is looking to track, not every single magic card
- Client only looking for unplayed/near mint cards.
  - Different websites classify cards differently
  - Team will have to go through list and decide what words are similar to Clients wishes
- Through project website client should be able to access list and take off cards bought/change cards wanted ect. (Account)
- Out of stock cards/quantity will need to be tracked while scraping
- Scraping should be possible to do once a day max for sufficient info (maybe 8am?)
- Prices of magic cards fluctuate every two months drastically (new sets)

List of websites sent to team by client
