

### **Agenda**

- Discuss Prototypes and any questions from presentation.
  - Clients were asked to look at prototypes and have questions (if any) prepared for next week.
- Discuss database issues (what will be provided and what we need to create).
  - Database will be an Oracle database
  - Database will be provided to us via NetReg\*
  - We will create an additional database for users and room information
  - Client will add some new fields to the NetReg\* database to centralize the information, i.e. make, model, OS...
  - Client provided the SQL table definitions for NetReg\* database
  - Mr. Crossman gave a quick look at what the NetReg\* system looks like. Information about devices included:
    - Hostname
    - Hardware Address
    - Model
    - IP
    - Subnet (department)

### **Next week**

- Discuss what tables we will be dealing with in the NetReg system.

\*NetReg – the system that is currently used to register existing devices on the networks in the science buildings.
