

### **Agenda**

Preliminary understanding of the client's problem and the project assigned to our team.

### **Client description**

- Interested in a web-based network mapping tool.
- Should integrate the floor plans of Roger Bacon and Morrell Science Center.
- Interface similar to map on Siena's CS department website.
- As dynamic as possible, extensible/adaptable for later changes.
- Add in a search function to look up faculty members computers or find machines via mac address.

### **Problem**

- Our clients need to be able to view information about computers in Roger Bacon and Morrell without physically looking for them.
- Inventory purposes – our clients need a visual listing of computers and wall boxes (with their locations) which can be modified later.

### **Available resources**

- Information in the form of several spread sheets listing computers in each building, their port, and other pertinent information.
- Dreamweaver, Fireworks, Flash, Oraserve.
