

Agenda

Discuss use cases with our client for clarification in order to write the use case narratives.

Users

- Administrator – read & write user with all privileges.
 - need to be able to change/delete the device information.
- Limited – user with only view privileges.

Use Cases

- Faculty member having trouble with a printing in Morrell logs into the program and views the layout of their floor to find the name and information of the printer in the hallway.
- System Administrator receives a call from a faculty member with a computer problem and searches on their last name to find the location of their office.

Required Content

- Network devices such as: printers, workstations, wireless access points, and the standalone wireless laptop cart.
- Information such as: make, model, serial, IP, MAC address, and its asset tag (the ID Siena uses for each computer).

Visual Specifications

- First display is menu (indicate admin-only permissions here).
- Web-based, must be password protected so if you do not login as an admin or user, you may only view the first menu page.
- After logging in, the interface is a floor diagram that zooms in to see the rooms.
- Ability to zoom in and still navigate to see rooms down the hallway.
- Different icons for networked devices, click on the icon to list its information.

Miscellaneous

- Naming convention for Siena computers: BuildingRoom#PC#.
