Team Meeting #21

e-SATA: Database, Interface, Grading

Members Present: 5/5
Colin Cubinski
Daniel Nakhla
Matthew Restivo
James Rocco
Justin Valentini

Date: March 19th, 2007
Start Time: 7:00PM
Location: Software Engineering Lab

Tonight’s agenda was to go over and finalize the scope of our project and the work that needed to be done. We need to get a database created and learn how to interface with it, get the back end and front end functionality of e-SATA started, as well as code and test our grading software, so that we can put all of this together to create a working piece of software for our clients. Going over each team members strengths, we divided up the work evenly for now so that things would get done effectively and efficiently. We also looked over our Test Plan corrections and sought out new mistakes in our e-SATA prototype so we would have a heads up as we continue working.

End Time: 8:30PM
