

Detailed Design

Requested by: Ms. Mary Partridge-Brown
Ms. Roberta Sandler
Co-Directors
Grassroot Givers' Community Store

The logo for SMARK Solutions is centered on the page. It features the word "SMARK" in a bold, uppercase, sans-serif font, followed by "Solutions" in a lowercase, sans-serif font. The text is contained within a light blue, horizontally-oriented oval shape. Below the main text, the tagline "Be intuitive. Be efficient. Be SMARK." is written in a smaller, lowercase, sans-serif font.

SMARK Solutions

Be intuitive. Be efficient. Be SMARK.

Prepared by: Salvatore Baisley - Database Manager
Mary Ritchie - Webmaster
Anna Grant - Programmer
Ryan Martin – Team Lead
Kathryn Egan - Lead Programmer

1. Product Overview and Summary

Grassroot Givers is a non-profit organization devoted to bridging the gap between those in need and those seeking to donate. One of the ways in which this is achieved is through the Community Store within their facilities at the GWU Center in Albany, NY. The mission of this store is to create a boutique-like atmosphere so that customers can “shop with dignity”. Co-directors of Grassroot Givers, Mary Partridge-Brown and Roberta Sandler would like to develop an easy to use, web-based application to supplement their everyday functions of the store.

S.W.I.F.T. (Simple Web Inventory For Tracking) is a web-based application that will allow Grassroot Givers to track incoming items through the creation of donor and customer profiles, database searching, and receipts.

2. Use Case Narratives

2.1. Volunteer

The volunteer will login on to S.W.I.F.T. using a unique username and password. The volunteer will have access to a page where the volunteer will choose to either enter a new customer, look up the history of a specific customer, check out a specific customer, or take in a donation. If the volunteer wishes to enter a new customer into the database, there will be a form for creating a customer profile. The form will require the volunteer to enter the name of the customer, address of the customer, number of family members in the customer’s household including each member’s age, and other agencies which the customer is affiliated with, additionally the date that the profile was created will be stored in the customer’s profile. The volunteer will have the ability to search the customer records by name and address to view the customer’s profile. The volunteer will have the ability to search the inventory to see the quantity of the items that are in high demand. The volunteer will be able to check out customers, during which the customer’s history within the past three months will be reviewed. If the customer is eligible to take the items the customer has selected, the volunteer will record and store the items in the customer’s profile along with the date of the transaction, and the name of the volunteer doing the checkout. If the volunteer is taking a donation, the volunteer will record the number of bags and boxes being donated and the contents of the packages. The customer will tell the volunteer whether or not the customer desires a receipt and if so, a form will be filled by the volunteer indicating the items donated and their value. Regardless of whether the customer desires a receipt, the number of boxes and bags will still be recorded. Multiple volunteers will be able to be logged in at once.

2.2. Director

The director will login on to S.W.I.F.T. using a username and password specific to being a director. The director will have access to a page where the director will choose to either enter a new customer, look up the history of a specific customer, check out a specific customer, editing and deleting customer information, adding a new volunteer, or take in a donation. If the director wishes to enter a new customer into the database, there will be a form for creating a customer profile. The form will require the director to enter the name of the customer, address of the customer, number of family members in the customer's household including each member's age, and other agencies which the customer is affiliated with, additionally the date that the profile was created will be stored in the customer's profile. The director will have the ability to search the customer records by name and address to view, edit, or delete the customer's profile. The director will have the ability to search the inventory to see the quantity of the items that are in high demand. The director will be able to check out customers, during which the customer's history within the past three months will be reviewed. If the customer is eligible to take the items the customer has selected, the director will record and store the items in the customer's profile along with the date of the transaction, and the name of the director doing the checkout. If the director is creating a new volunteer account, the director will submit a form with the volunteer's information to S.W.I.F.T.. If the director is taking a donation, the director will record the number of bags and boxes being donated and the contents of the packages. The customer will tell the director whether or not the customer desires a receipt and if so, a form will be filled by the director indicating the items donated and their value. Regardless of whether the customer desires a receipt, the number of boxes and bags will still be recorded. Multiple directors will be able to be logged in at once.

3. UML Diagrams

3.1. Use Case Diagram

3.1.1. Use Case Legend

System Boundary: where interactions between both use cases inside the system and actors outside the system are shown

Use Case: the activities that actors interact with inside the system

Actor: human or non human users that interact with the system.

Participation line: lines that connect use cases and actors to show what actors participate in

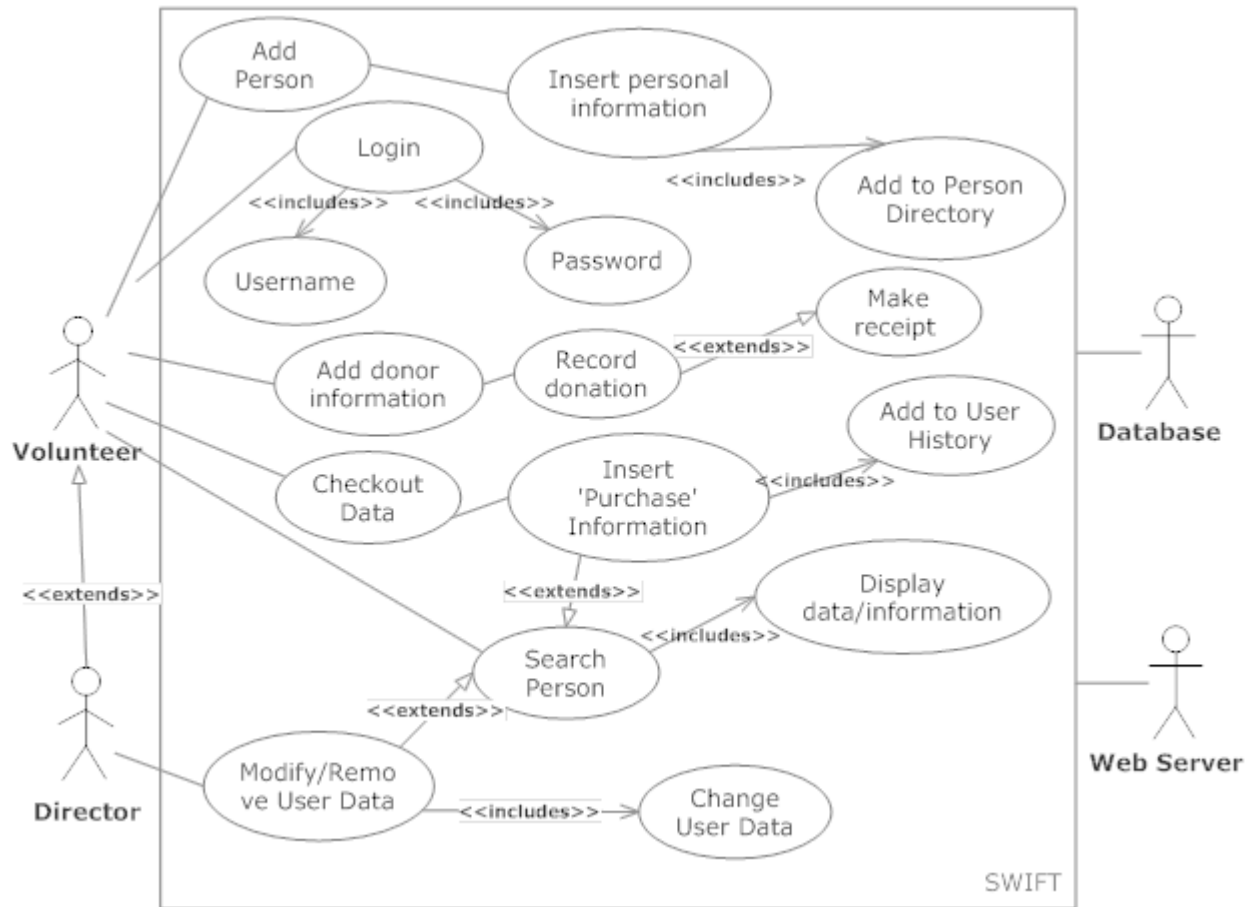

Extends: used to represent items that may be included in a use case

Includes: used to represent items that must be included in a use case

3.1.2. UML Use Case Diagram

3.2. Deployment Diagram

3.2.1. Deployment Legend

<HTTP>

Hypertext Transfer Protocol - application protocol used in distributing, collaborating, and hypermedia information systems.

<SCP>

Secure Copy - A way to securely transfer computer files between a local host and a remote host.

<ODBC>

Open Database Connectivity - Standard programming language API for DBMS.

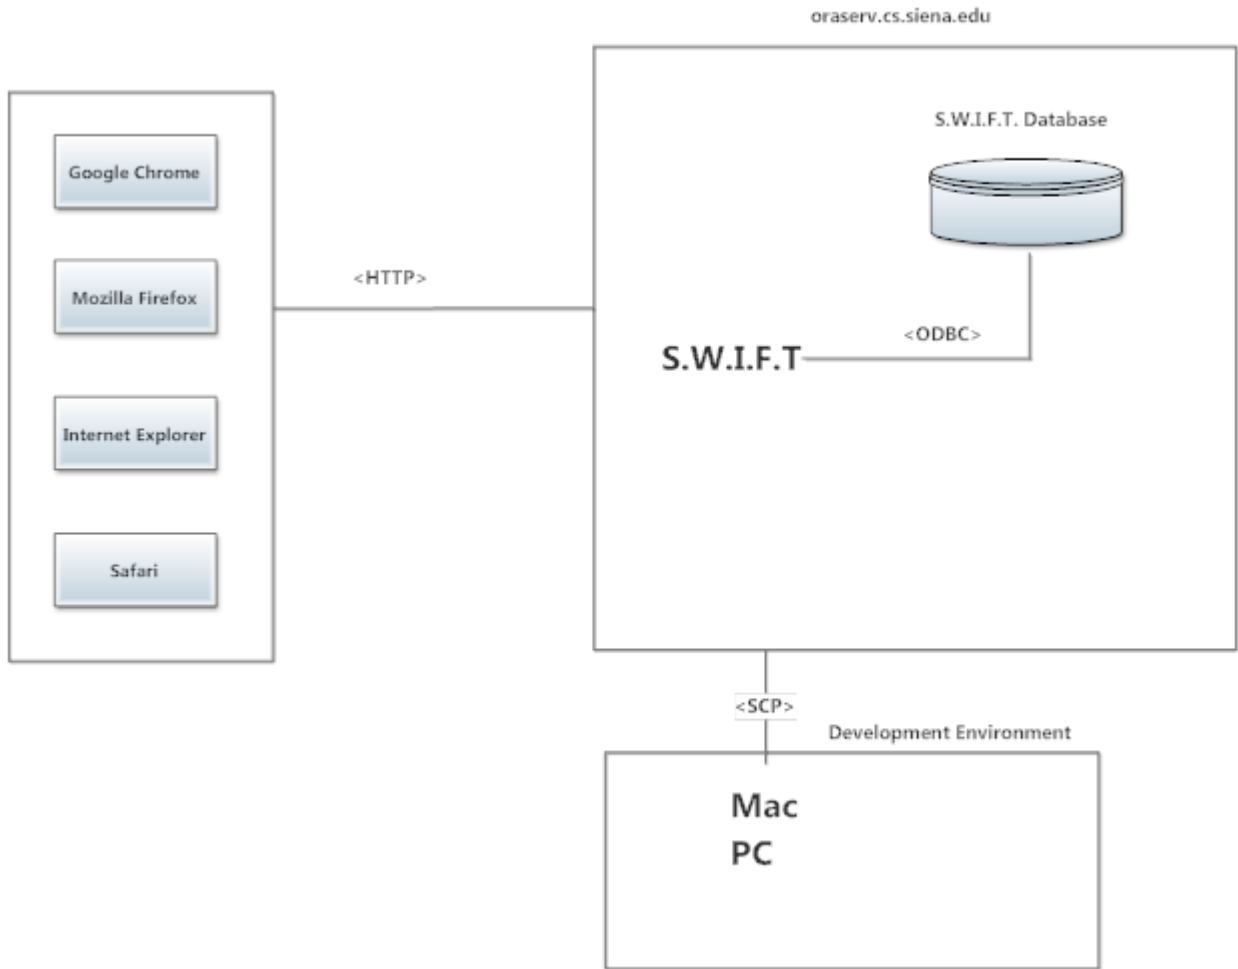

System Boundary - Represents the divide between the inside of the system where the interactions occur and the outside.

Connection - Represents a relation between system boundaries.

3.2.2. Deployment Diagram

3.3. Activity Diagrams

3.3.1. Activity Diagram Legend

Initial Node - The starting point for the movement through the activity.

Final Node - The ending point, where the process is over.

Decision Node - Represents a branching in the flow of the activity. Each branch represents a unique answer.

Activity Node - Describes the next step completed or that needs to be completed by the system to continue.

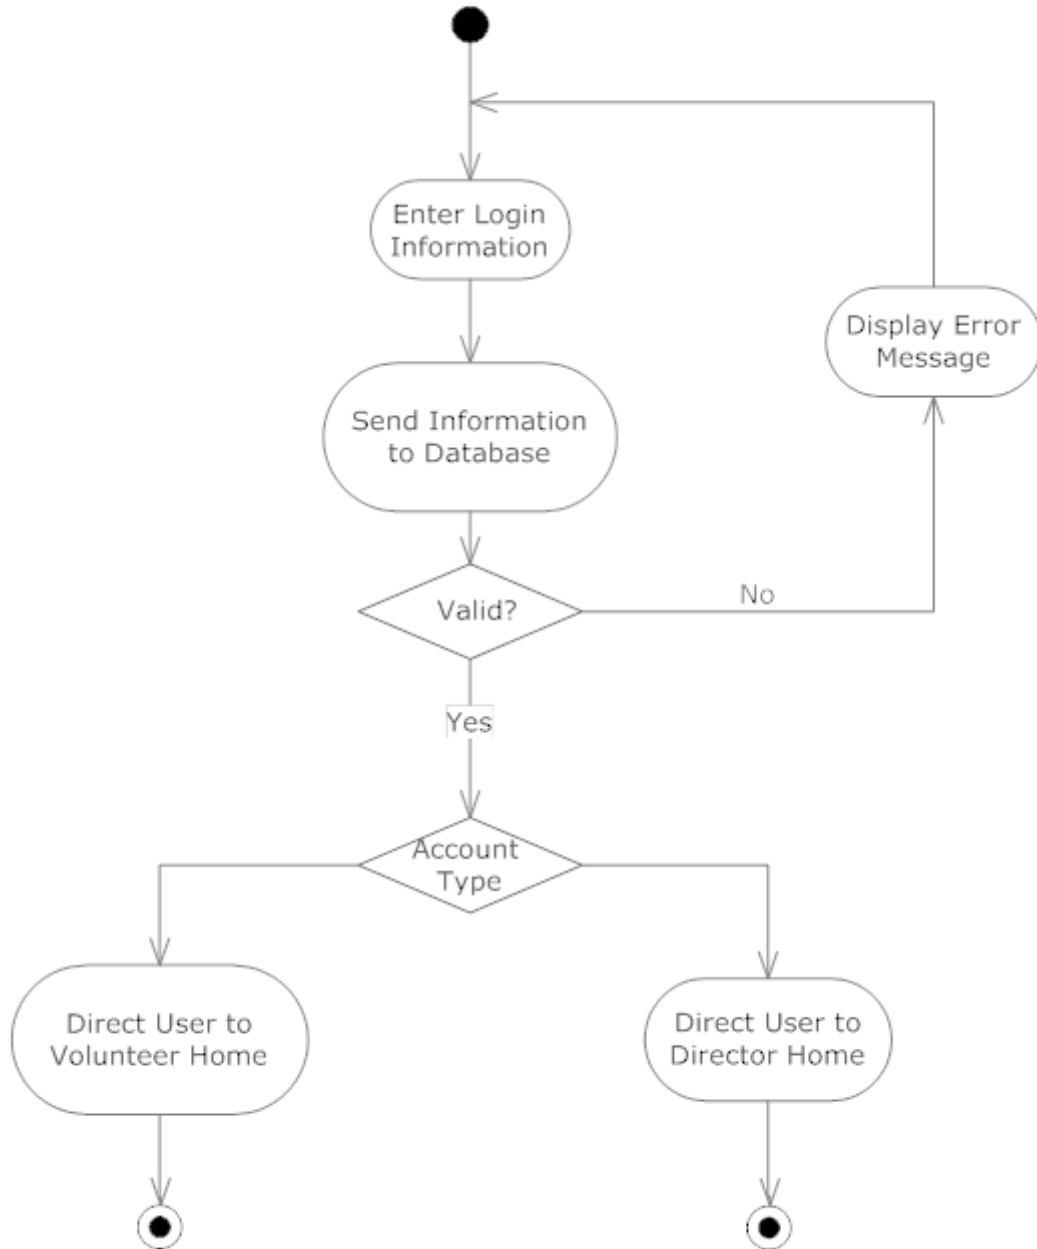

Split/Join - Separates or joins several different flows.

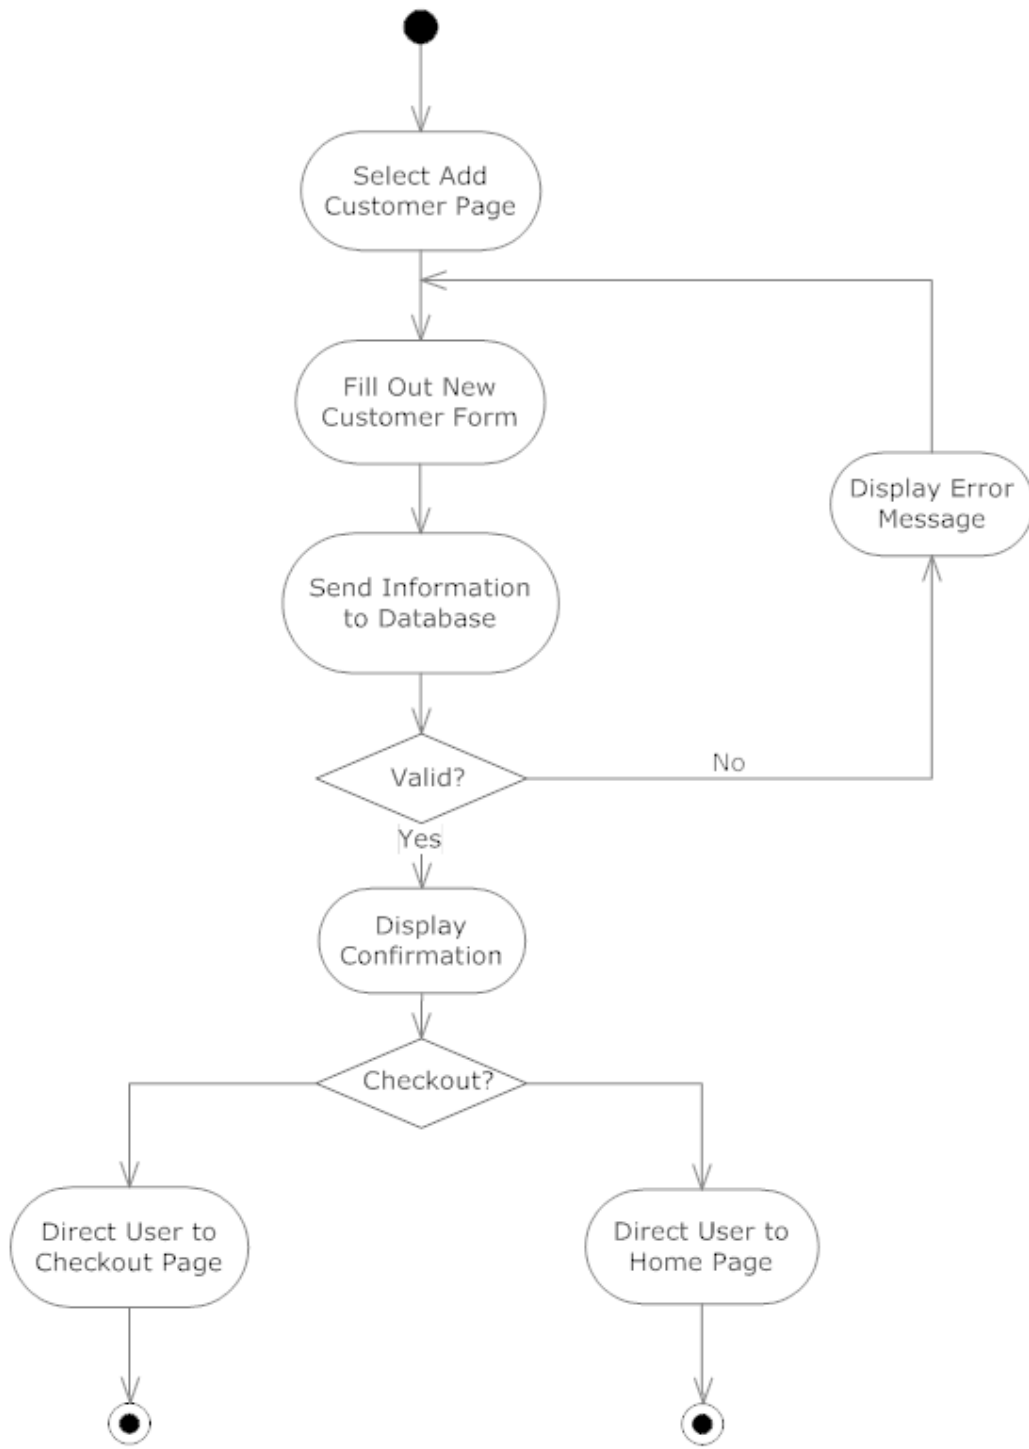

Flow - Demonstrates the movement of the activity.

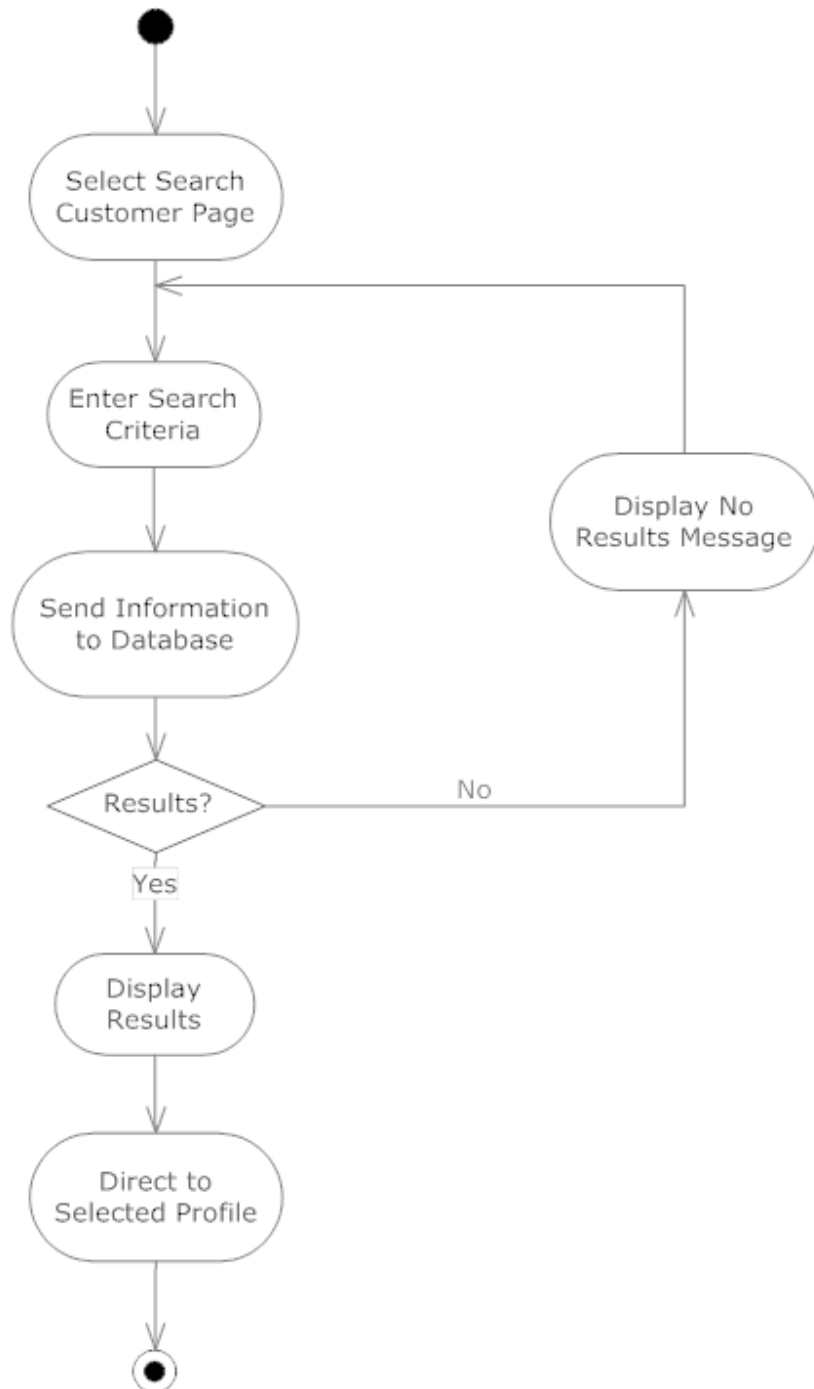

3.3.2. Activity Diagram: Login

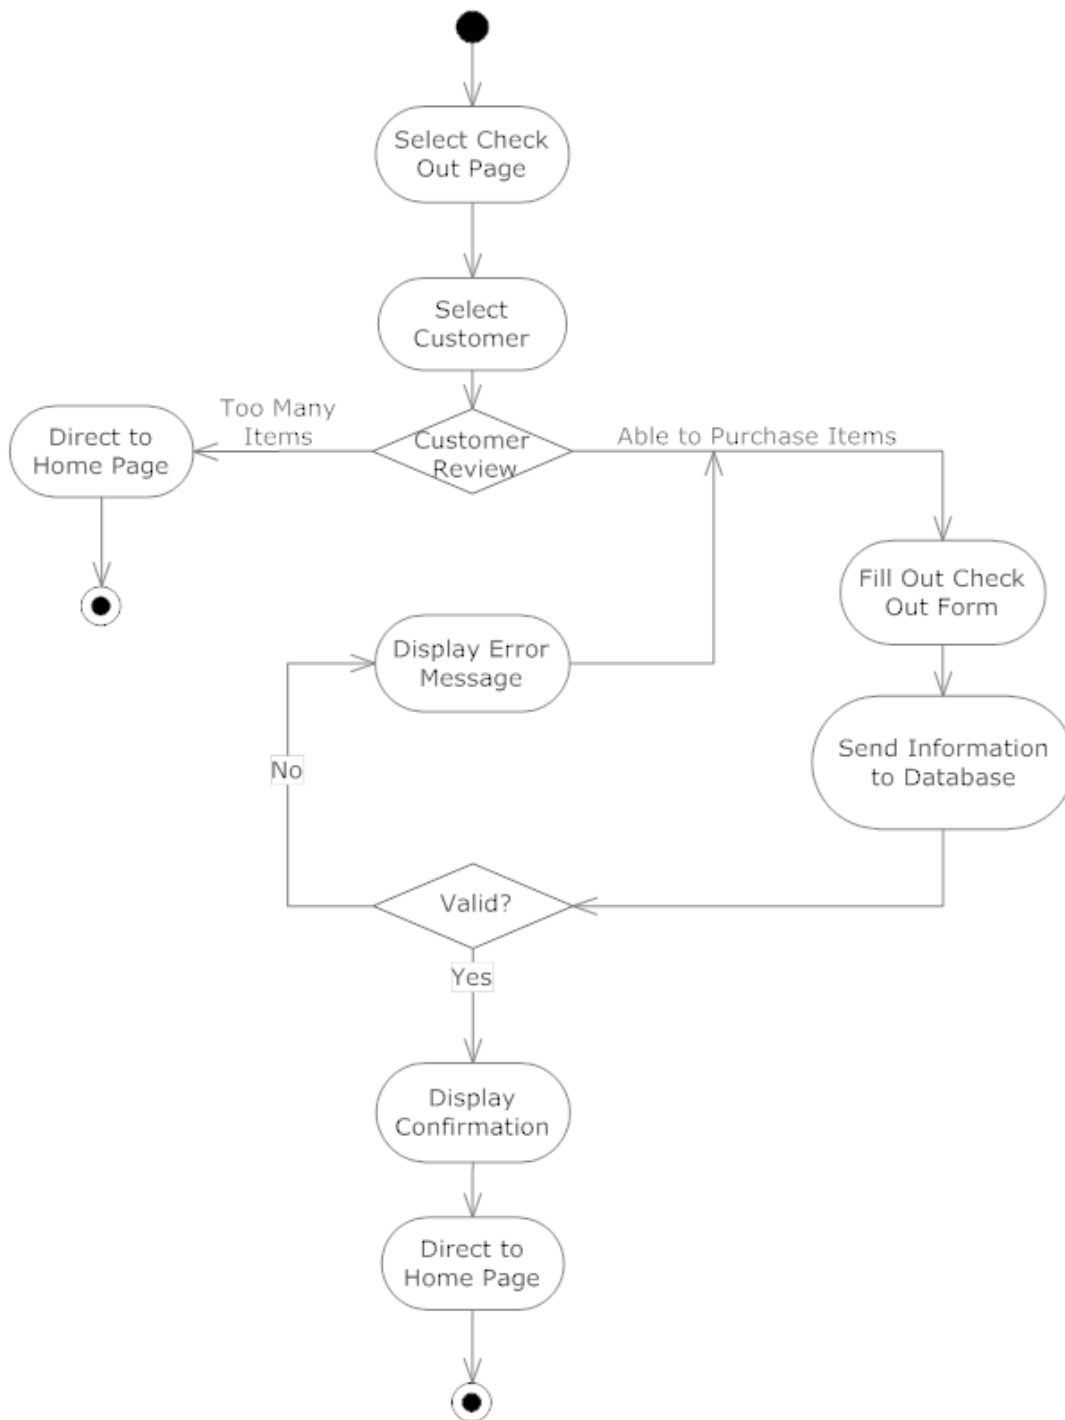

3.3.3. Activity Diagram: Add Customer

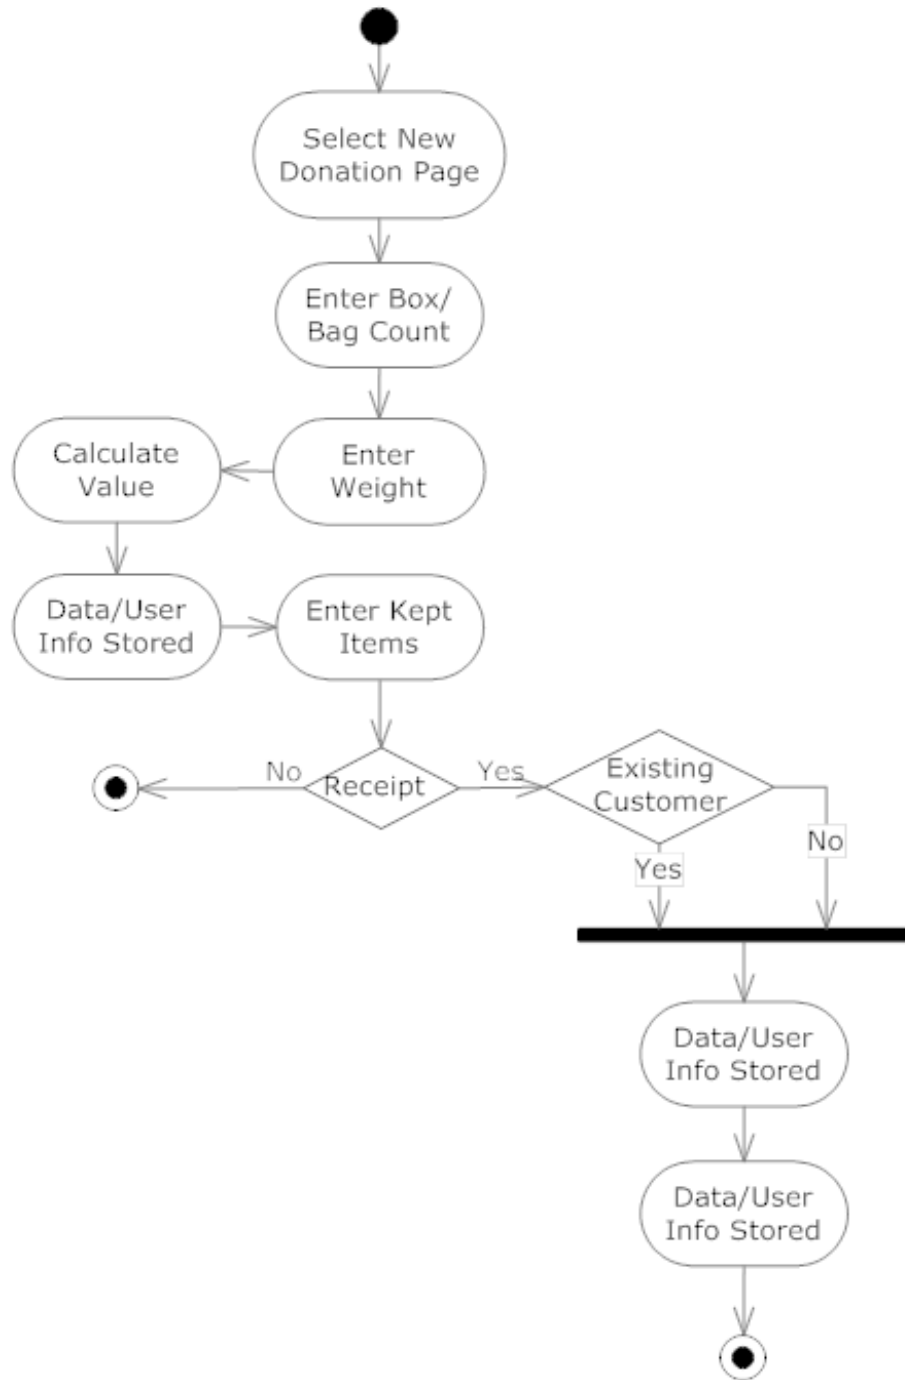

3.3.4. Activity Diagram: Search Customer

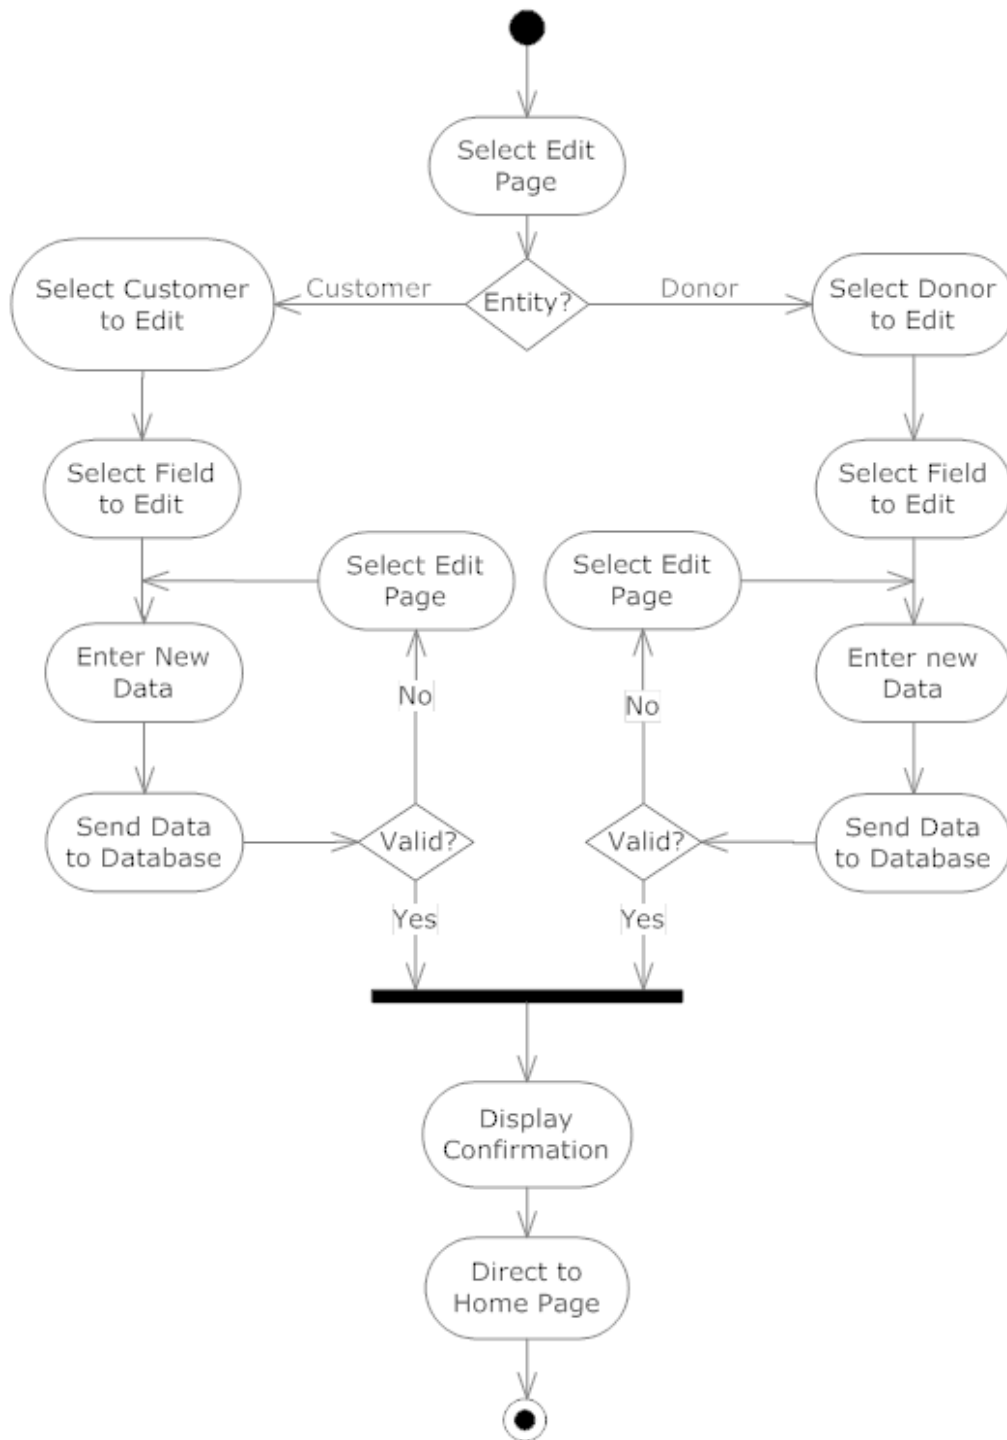

3.3.5. Activity Diagram: Check Out

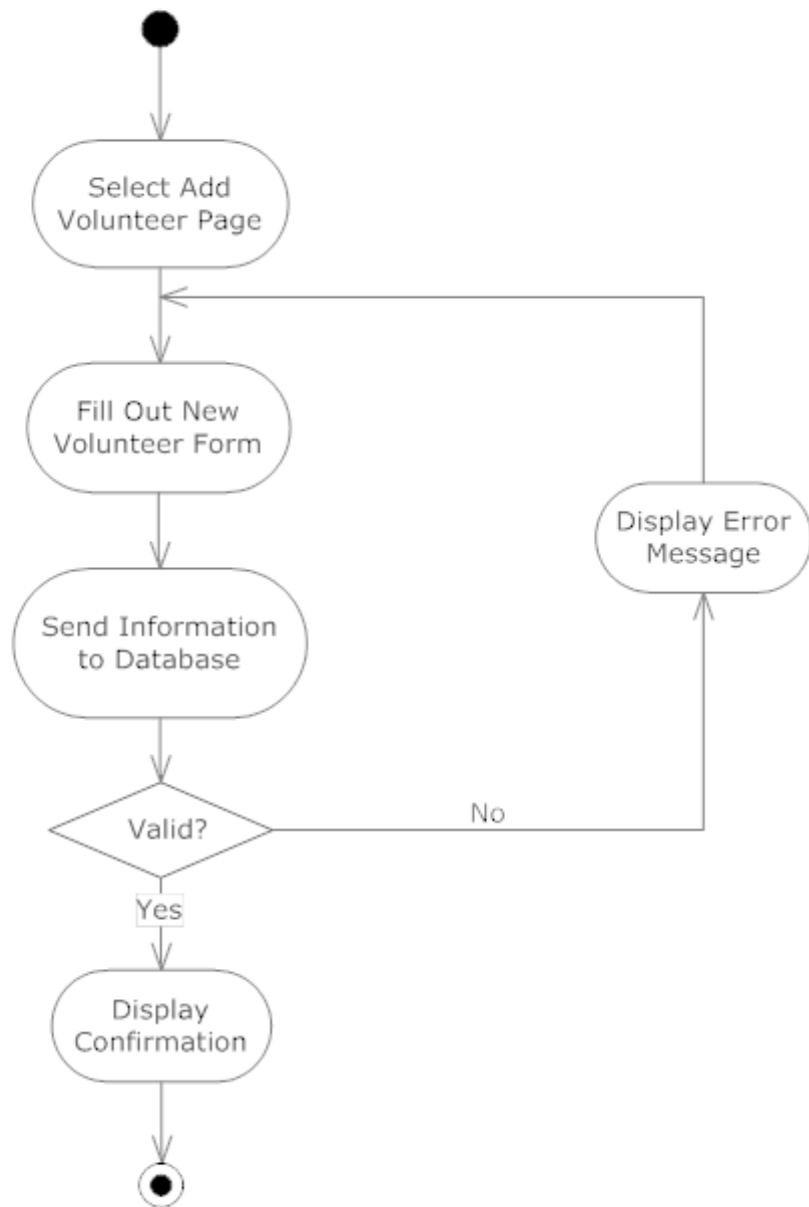

3.3.6. Activity Diagram: Record Donation

3.3.7. Activity Diagram: Edit Customer/Donor

3.3.8. Activity Diagram: Add Volunteer

3.4. Website Maps

3.4.1. Website Map Legend

Web Page - Represents a web page in the system.

Page Redirect - Forced direct to another page.

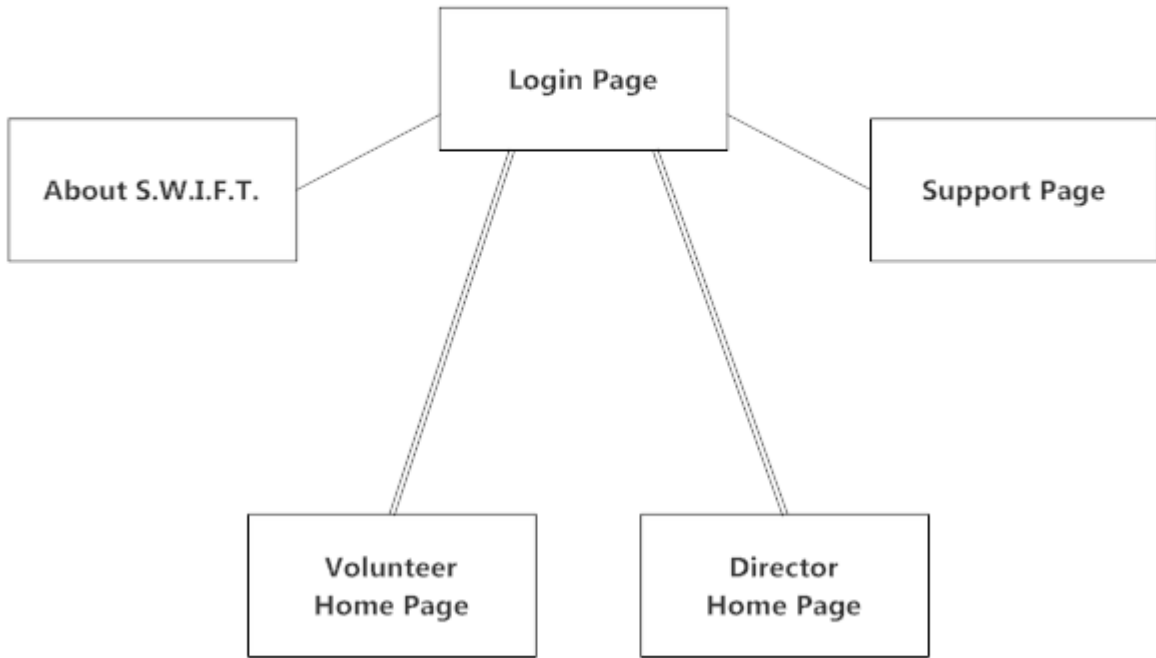

Link - Represents the ability to access one page from the other.

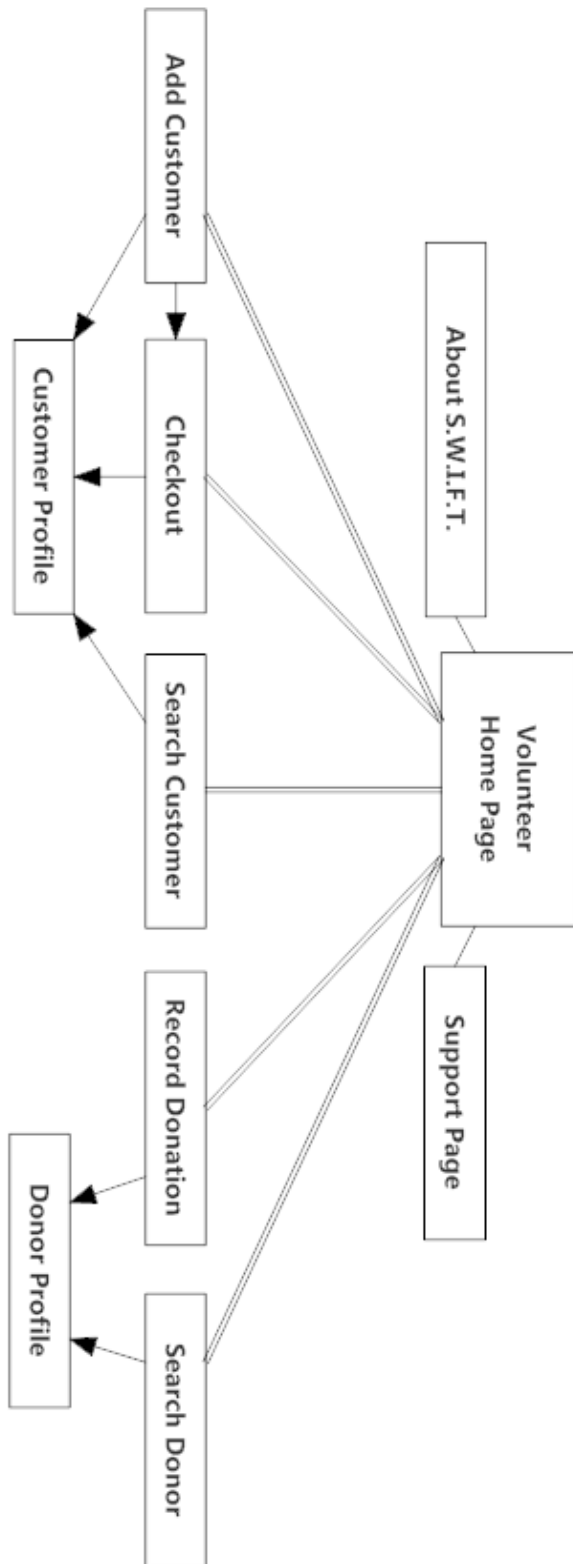

Double Link - Ability to go back and forth between the two connected pages.

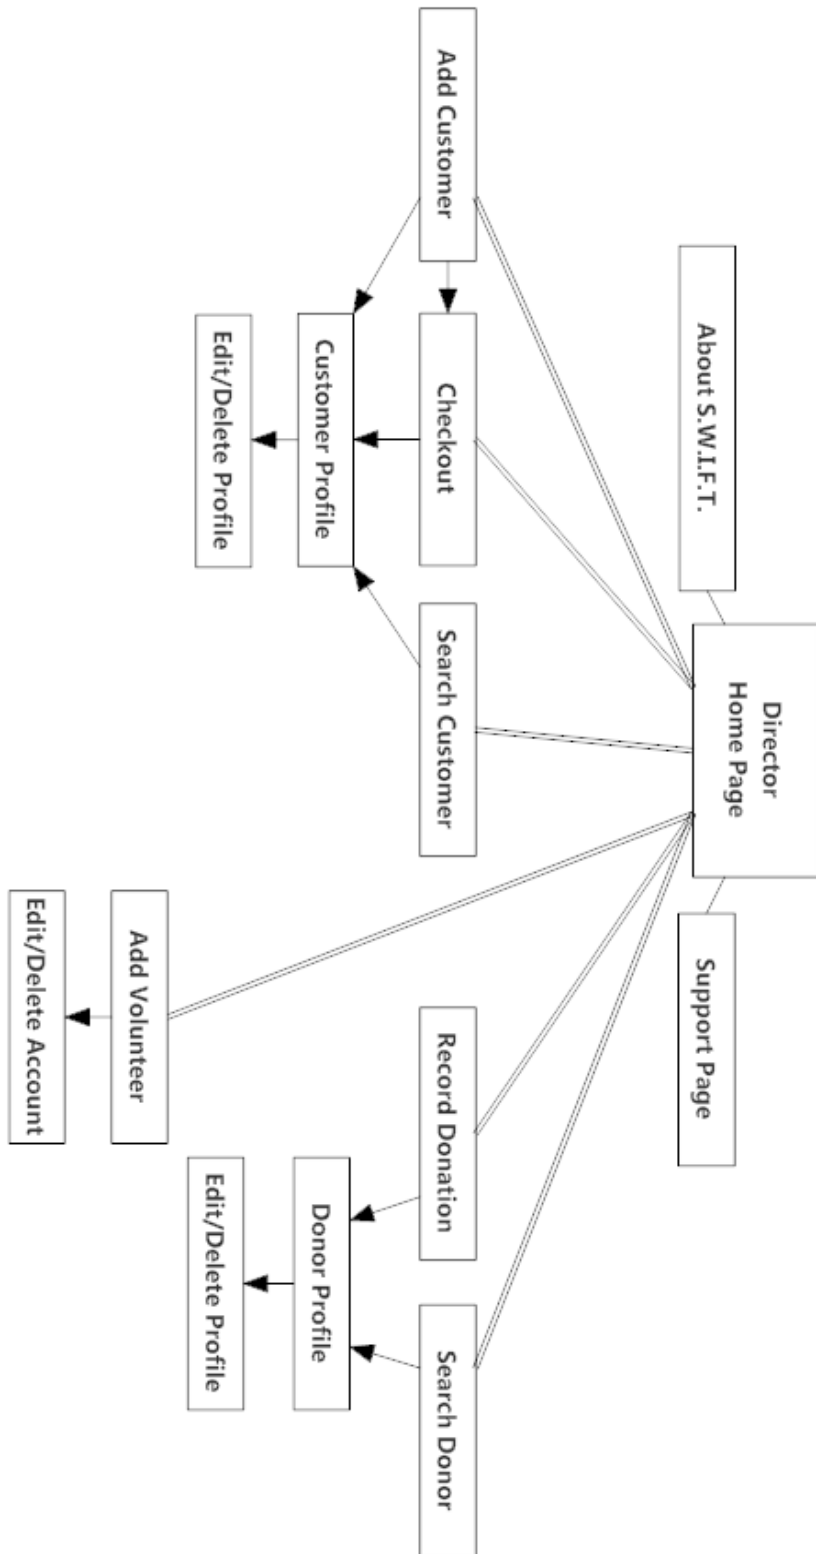

3.4.2. Website Map: Landing Page

3.4.3. Website Map: Volunteer

3.4.4. Website Map: Director

4. Data Flow Diagrams

4.1. Data Flow Legend

Process - Functions which are able to receive, modify, and output data.

Entity - Contributes data to and receives data from the system.

Data Store - A place where data is stored permanently or temporarily.

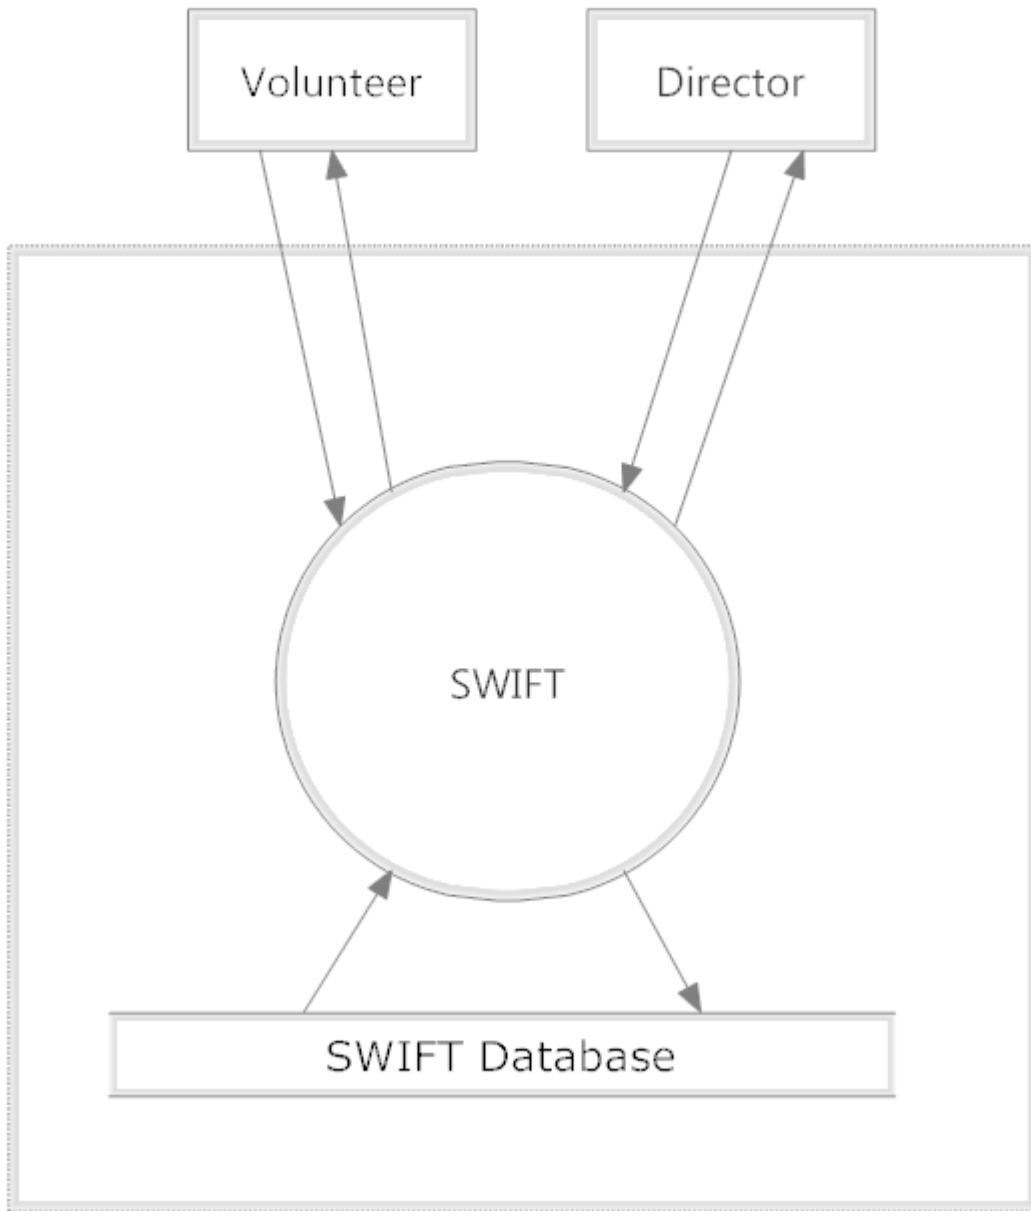

Data Flow - Represents the movement and direction of data.

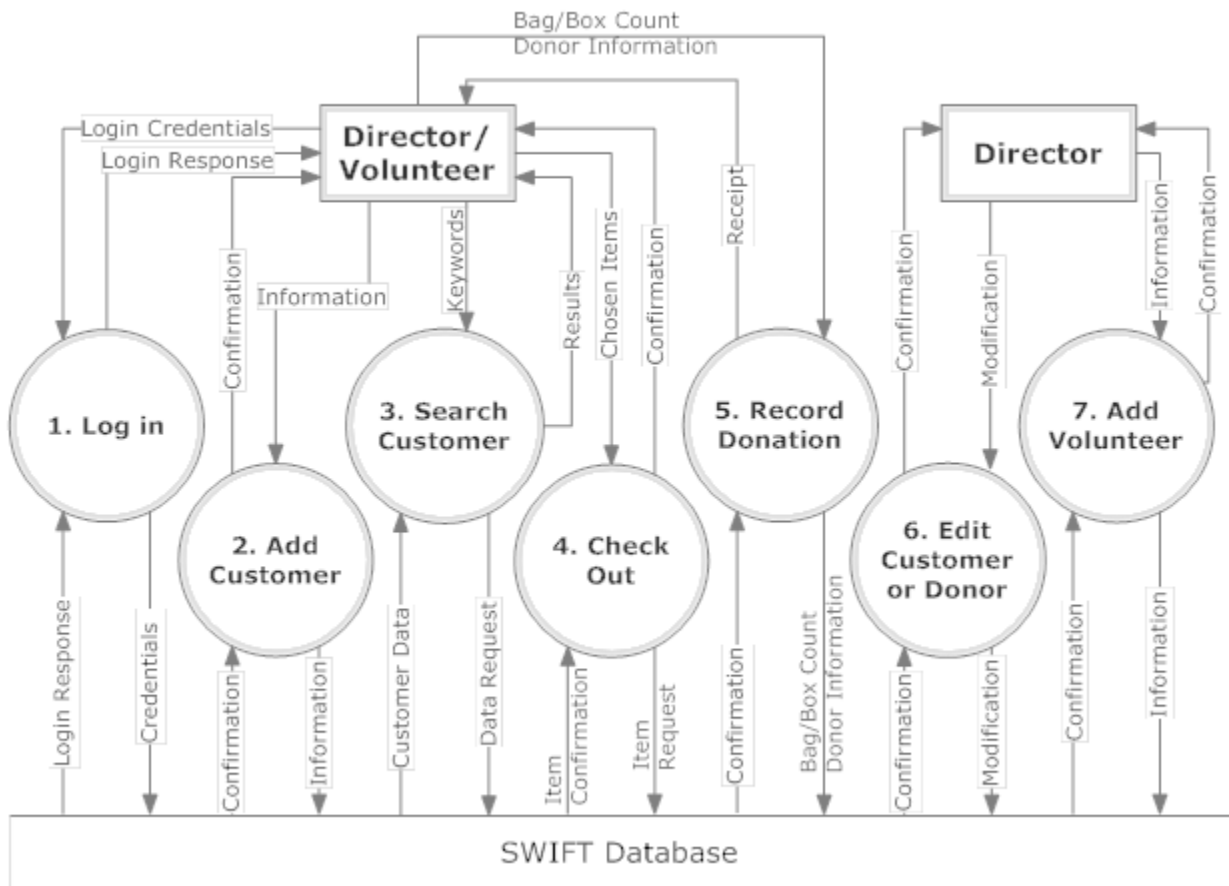

System Boundary - represents the boundary showing the data stores and the system processes inside the system.

4.2. Context Diagram

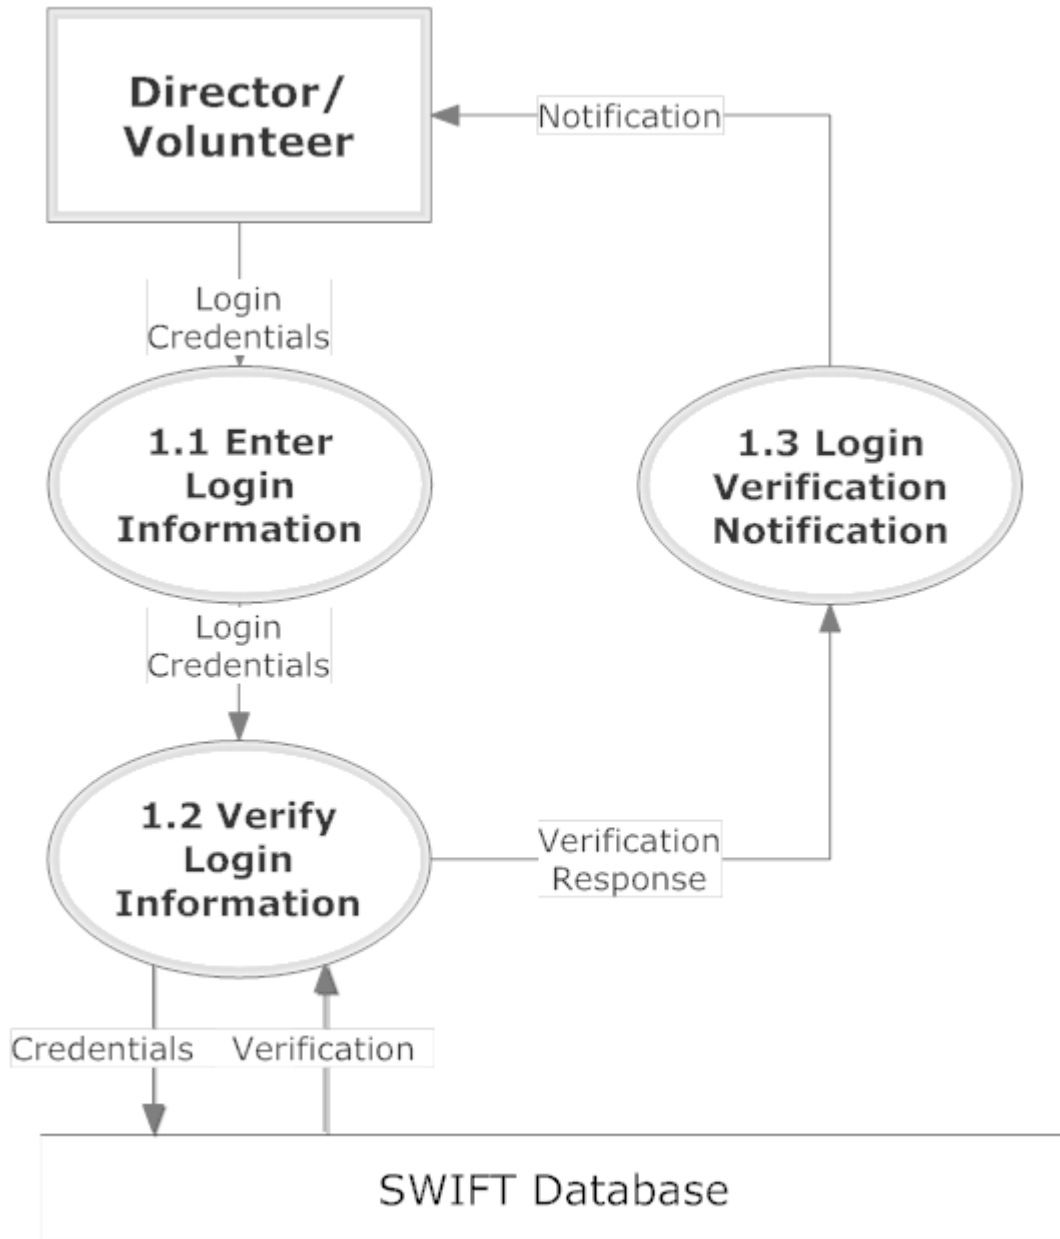

4.3. Level 0 Diagram

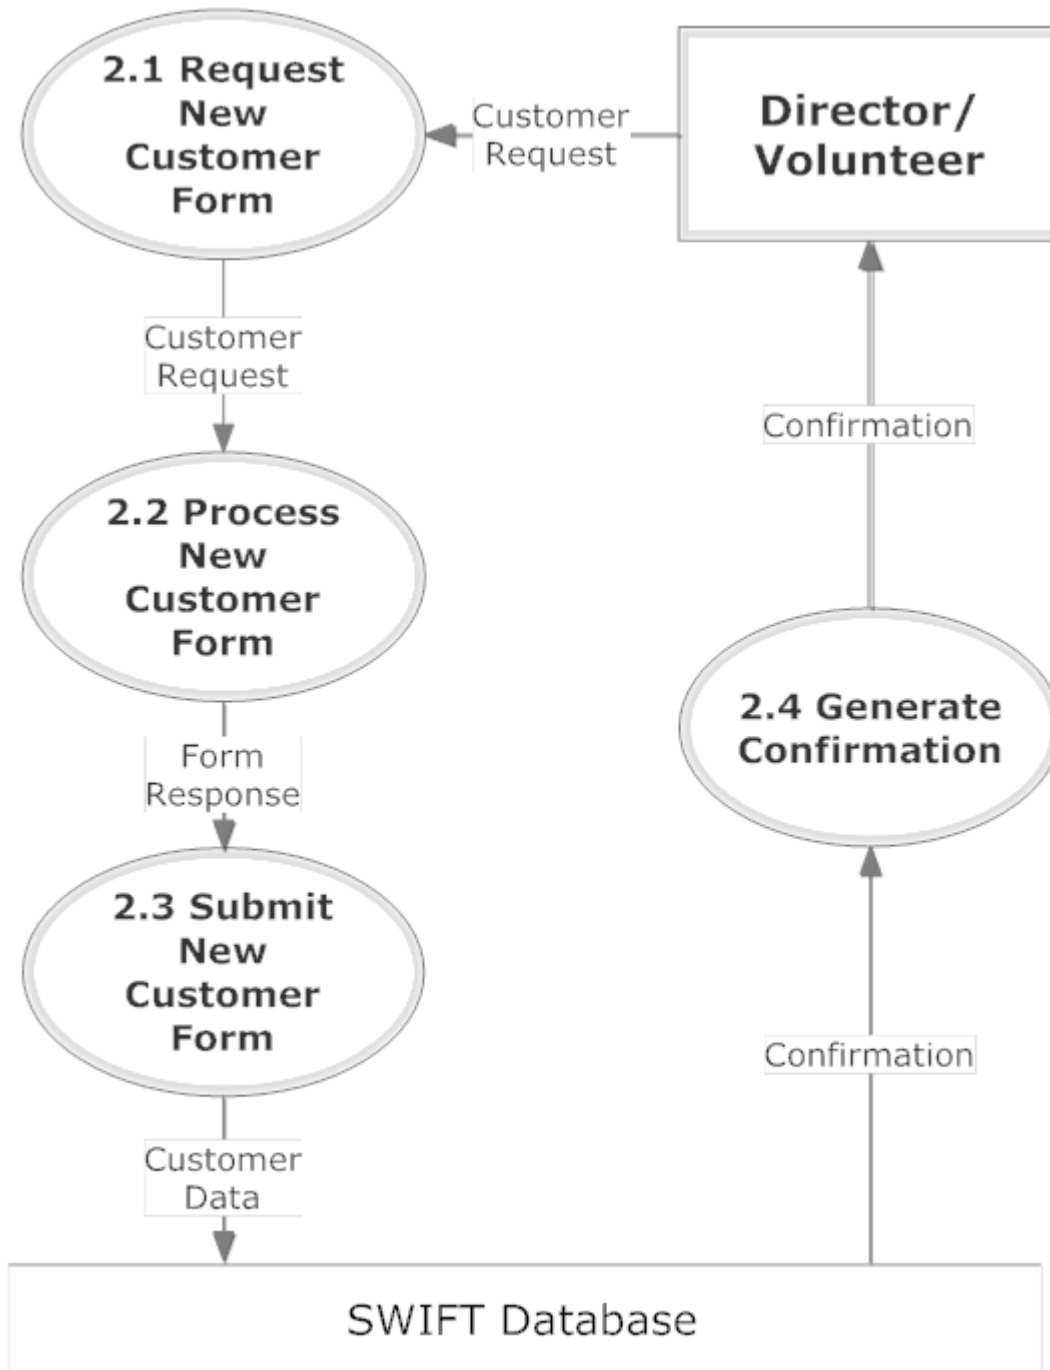

4.4. Level 1 Diagrams

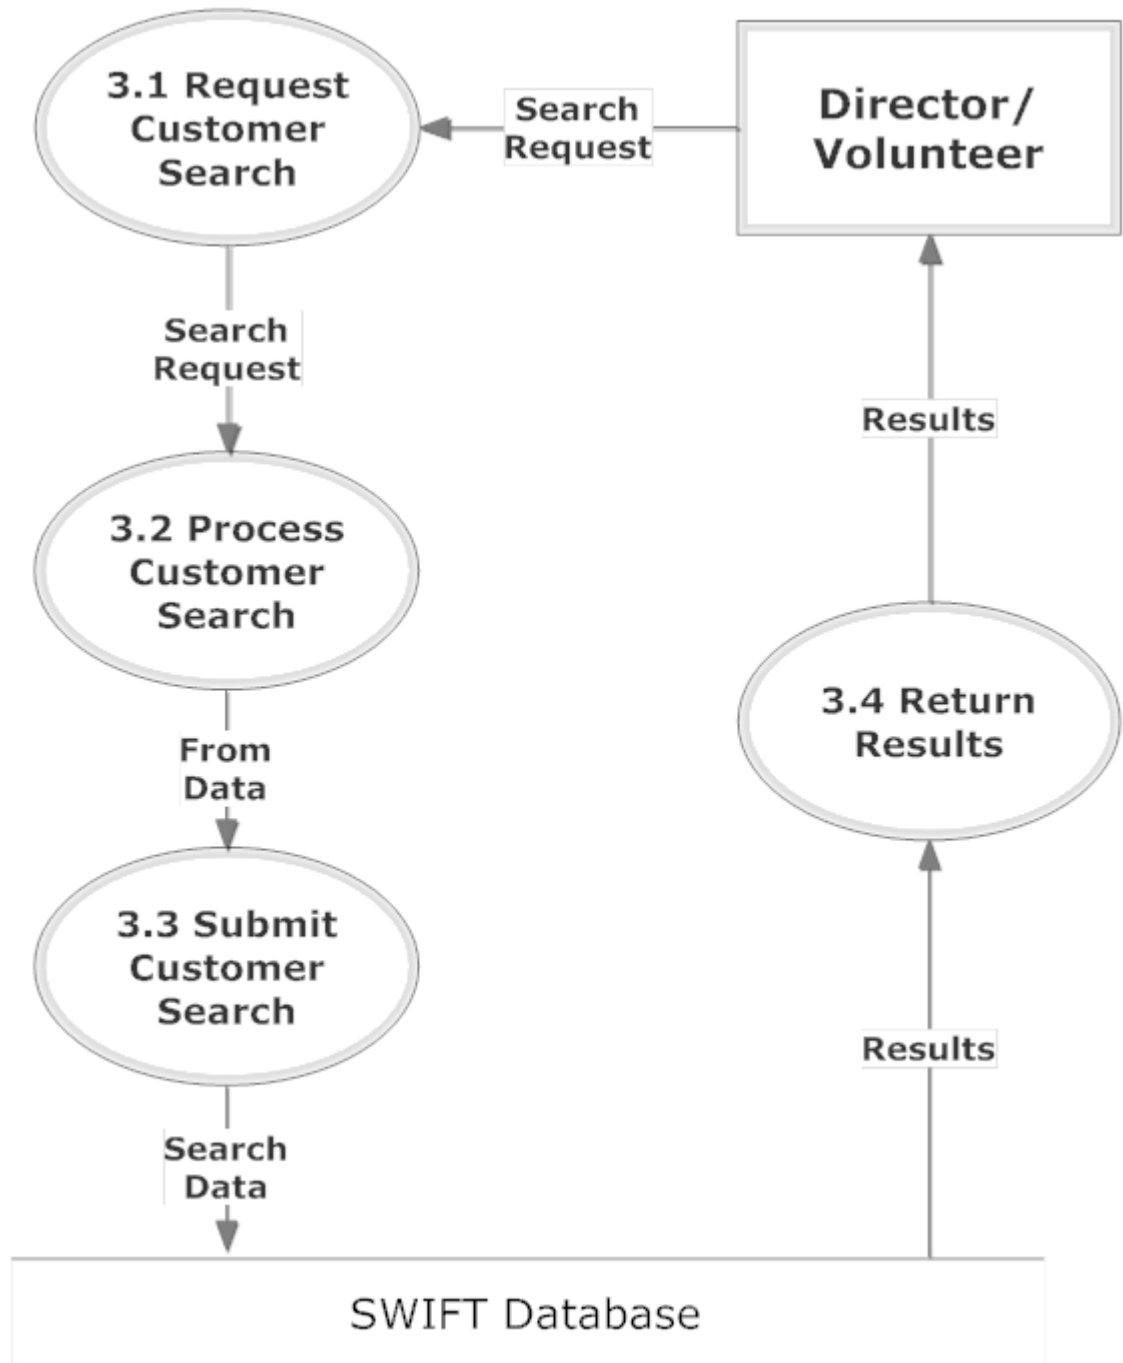

4.4.1. Level 1: Log In

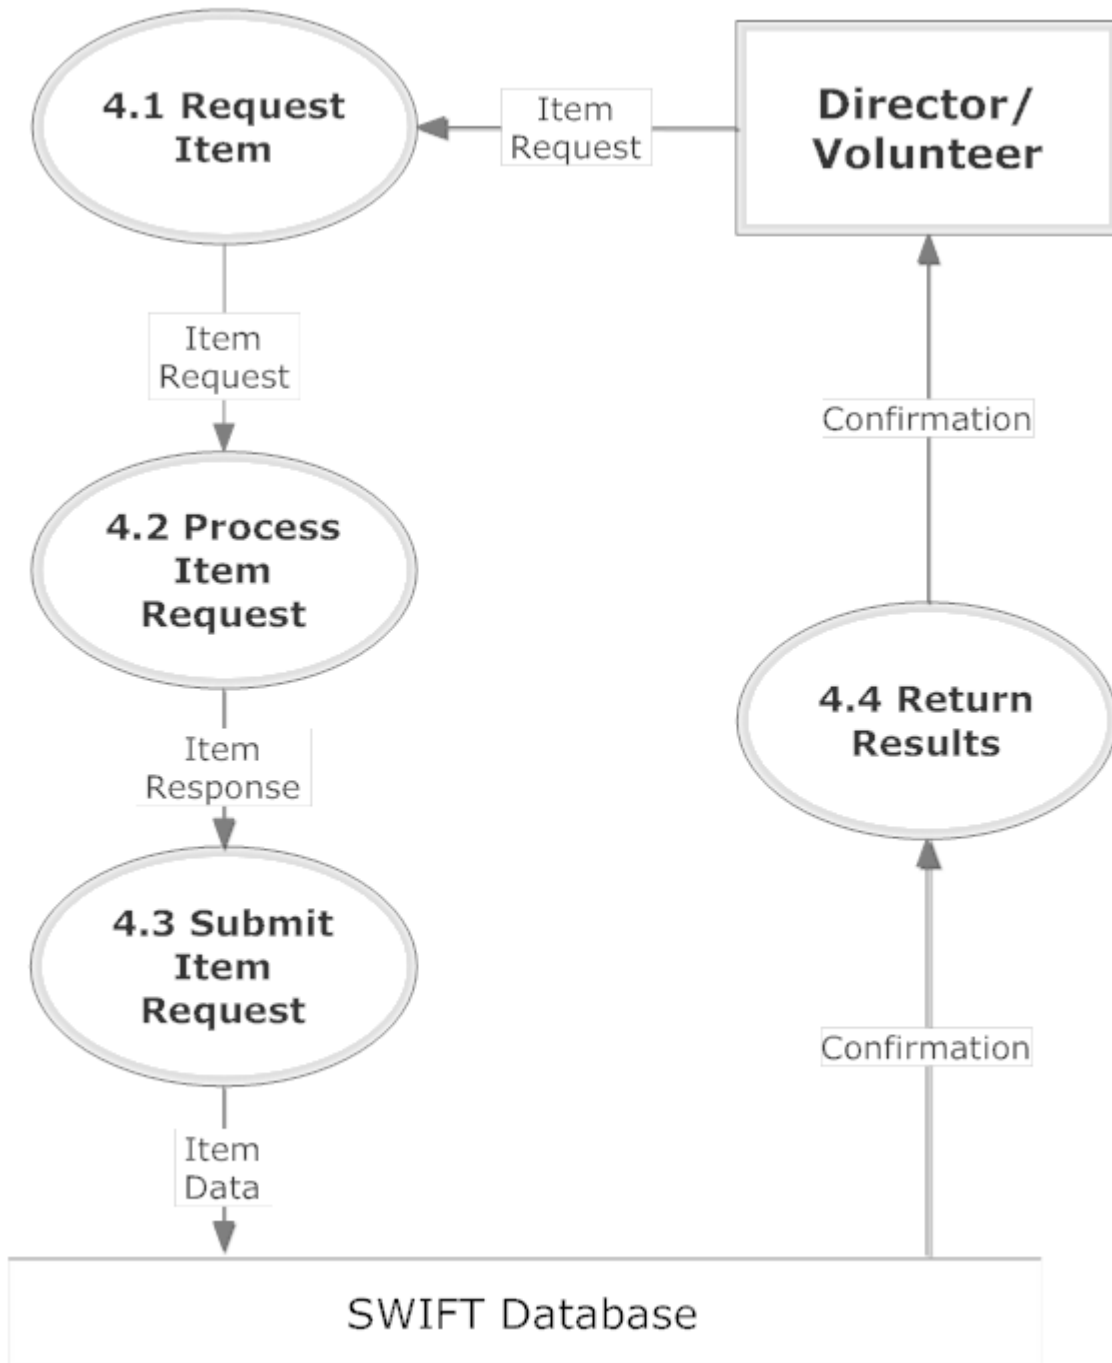

4.4.2. Level 1: Add Customer

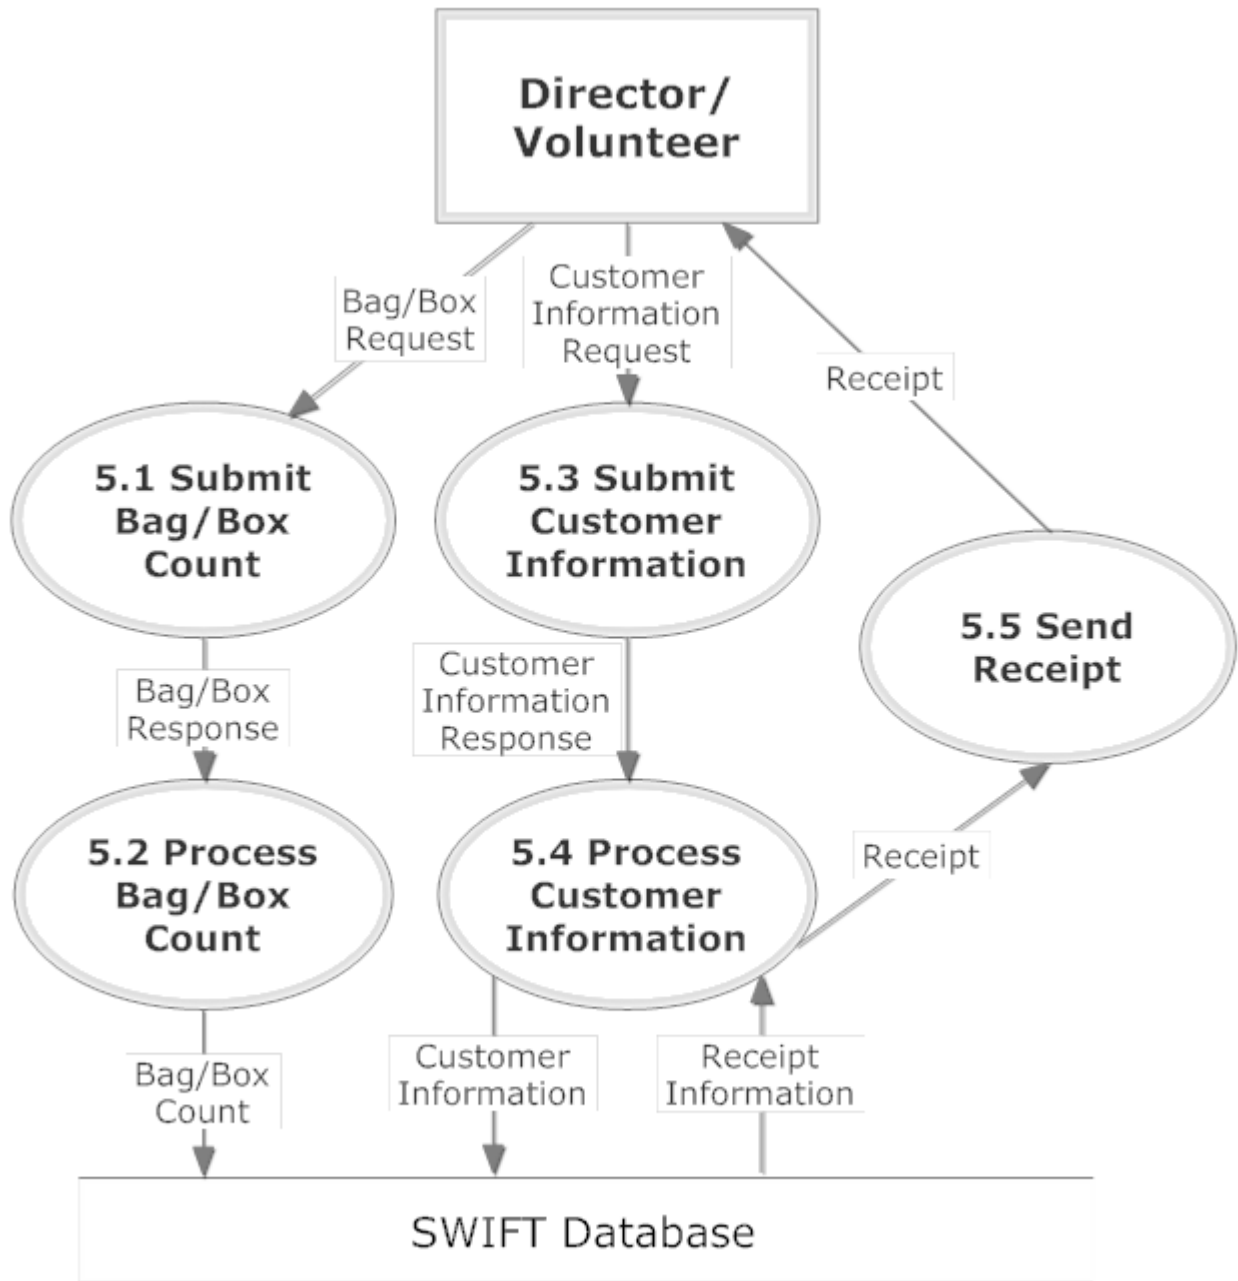

4.4.3. Level 1: Search Customer

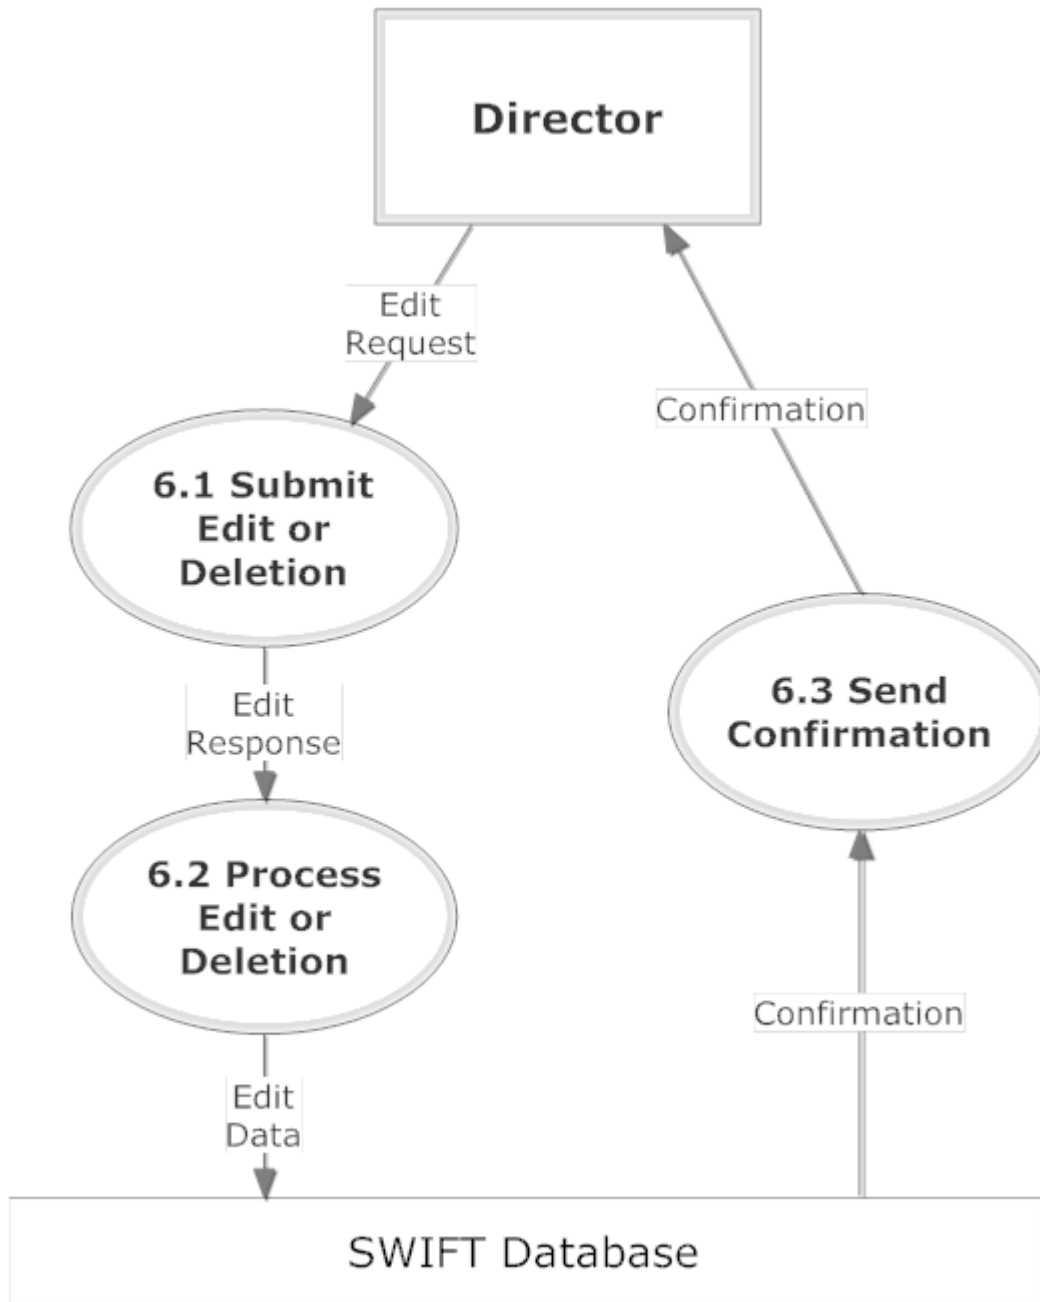

4.4.4. Level 1: Checkout

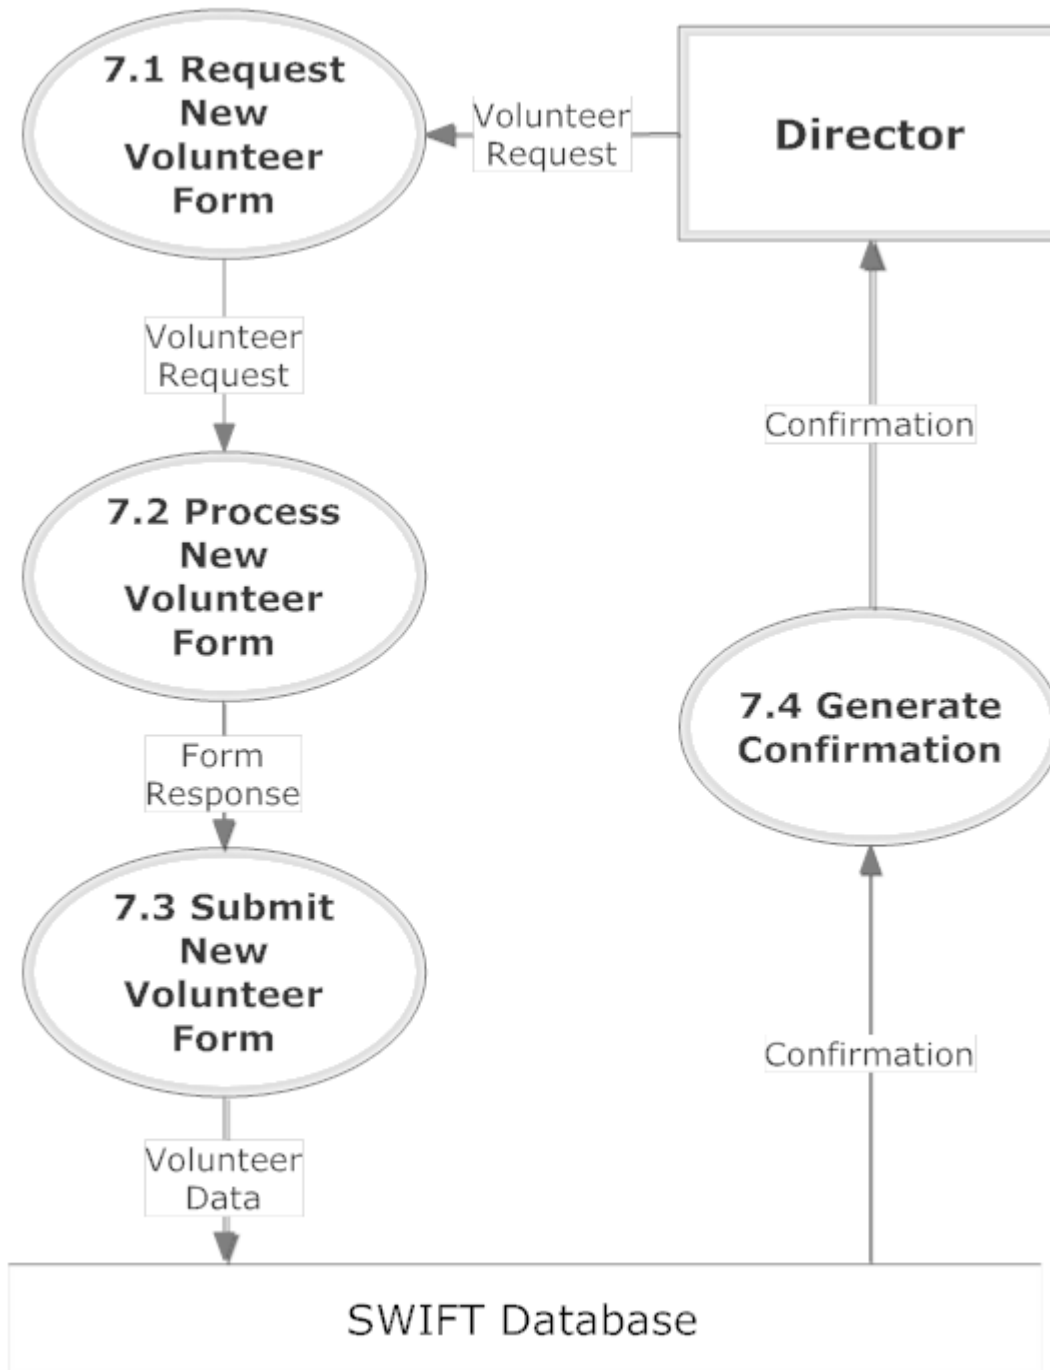

4.4.5. Level 1: Record Donation

4.4.6. Level 1: Edit Customer/Donor

4.4.7. Level 1: Add Volunteer

5. Structure Diagrams

Structure Diagrams show the hierarchy of all the elements involved in S.W.I.F.T.

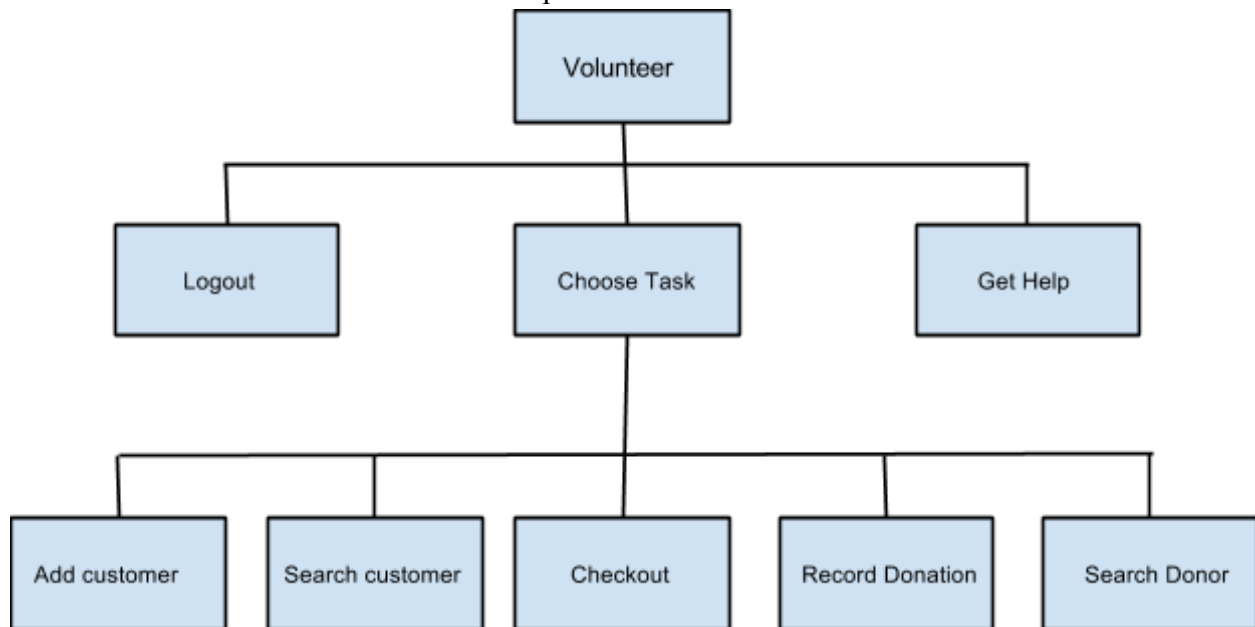

5.1. Login Structure

This diagram shows the login structure of the S.W.I.F.T system that allows access to components of the system depending on your role.

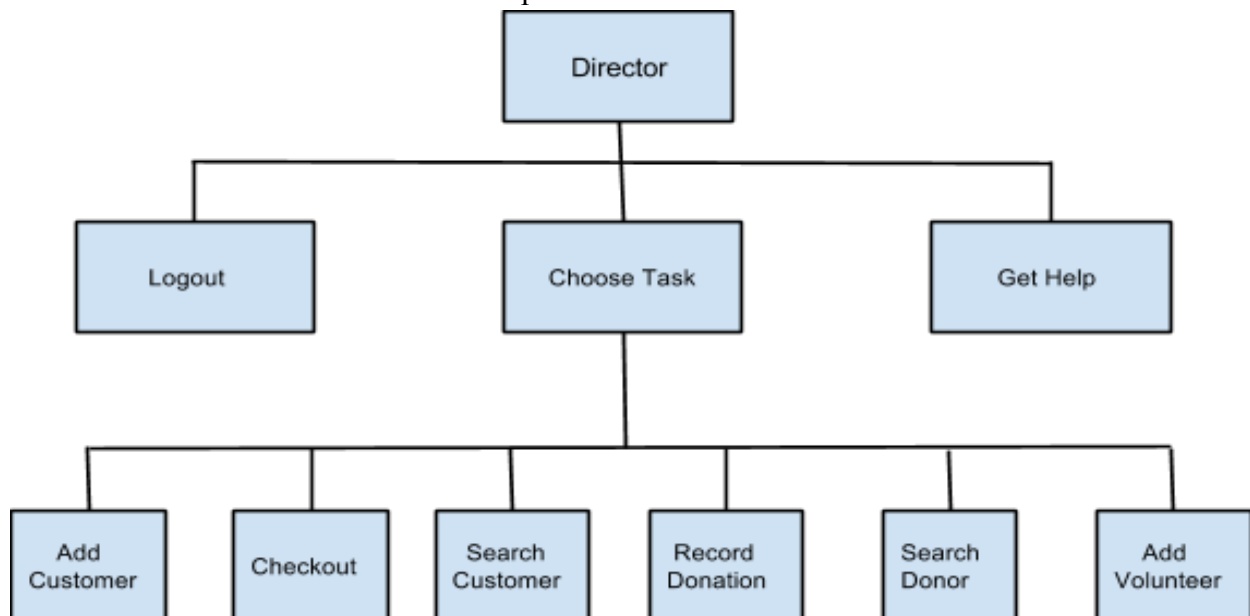

5.2. Volunteer Structure

The Volunteer Structure shows what components of S.W.I.F.T. the volunteer has access to.

5.3. Director Structure

The Director Structure shows what components of S.W.I.F.T. the director has access to.

6. Functional Requirements Inventory

The list below will provide a general outline for the users involved in the system and what they will have access to do. Since the software will be a user friendly web application, it will be able to be used on all major web browsers. The browsers that the software will be compatible with include Google Chrome, Safari, Mozilla Firefox, and Internet Explorer.

6.1. Volunteer

- Will be able to login
 - Logins will be individualized names and passwords
- Will be able to log out
- Will be able to search for a person
- Will be able to checkout items
- Will be able to create donation receipts
- Will be able to insert
 - customer information
 - purchase information
 - donor information

6.2. Director

- Will inherit all functional requirements for the volunteer
- Will be able to edit existing data on the system
- Will be able to delete data no longer wanted on the system
- Will be able to add volunteer accounts
- Will be able to delete volunteer accounts

7. Entity Relationship Diagram

7.1. ER Diagram Legend

Entity: An object which we wish to model within the database.

Attribute: A characteristic of an which we wish to store. If the attribute is underlined it is signifying that the attribute is a primary key.

Relationship: Connects two or more entities, showing how the entities are related.

Connections:

Single Line: Signifies a connection between a relationship and an entity.

Double Line: There must be at least one relation for each individual tuple of the entity attached to the line.

M/N Relationship: There can more than one relation where an individual tuple occurs.

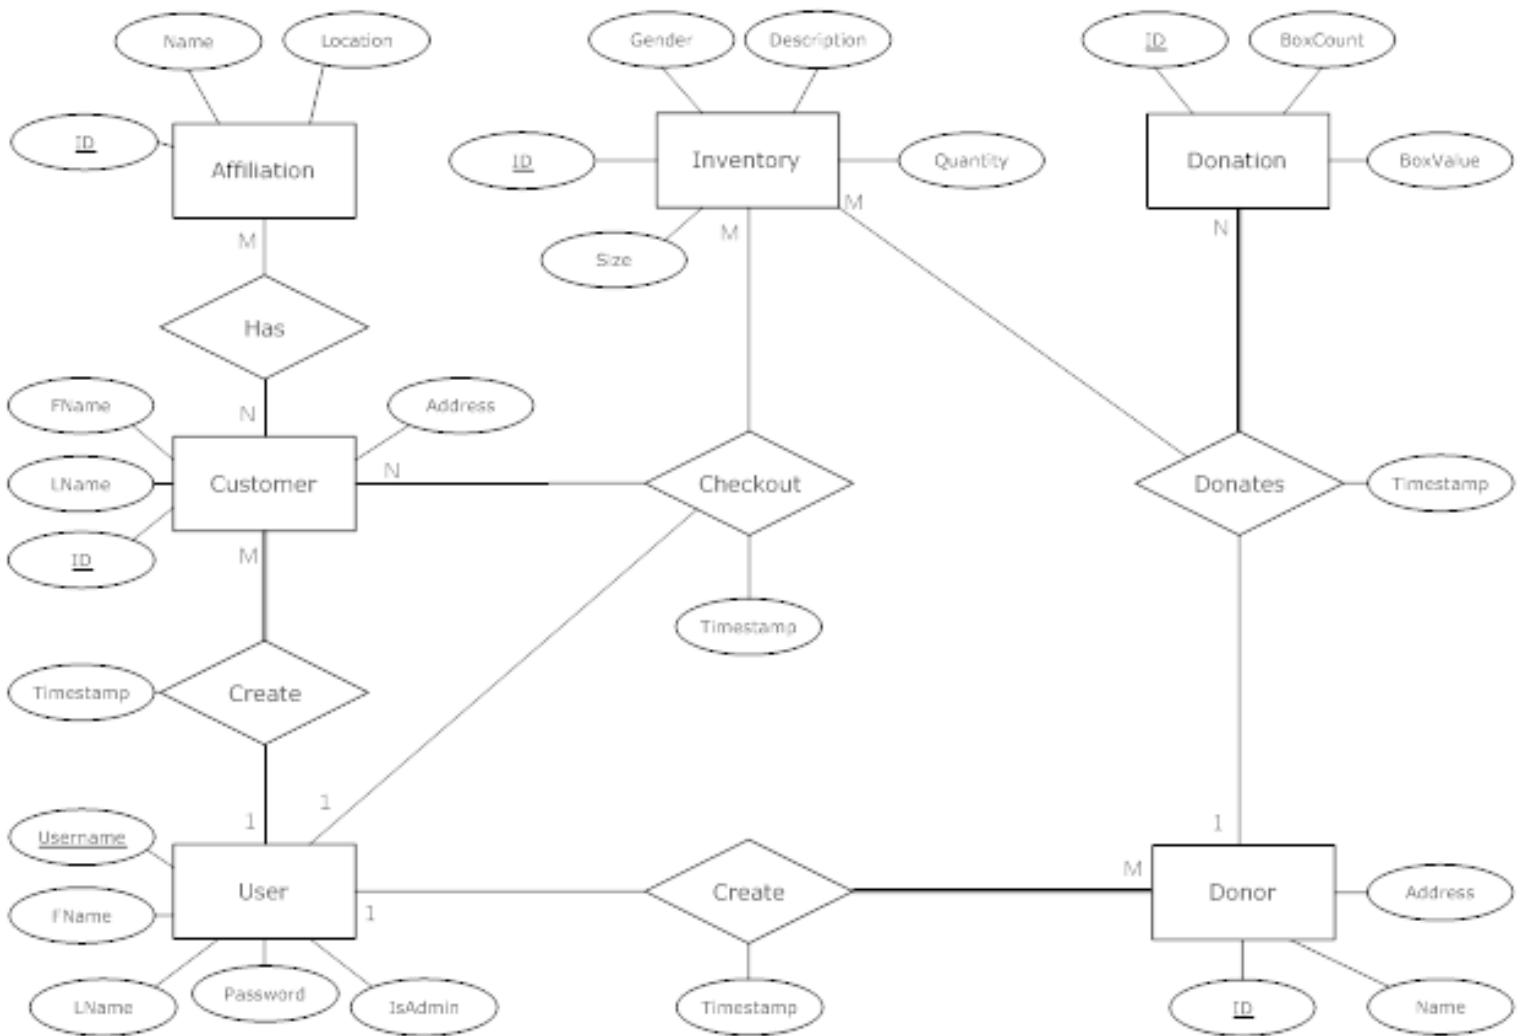

M/1 Relationship: The entity on the M side of the relation can only have a max of 1 instance of each individual tuple. The other side has no maximum.

1/1 Relationship: The individual tuples from each connected entity can only appear a max of once.

7.2. ER Diagram

8. Relational Schema

9. Logical Data Dictionary

This logical data dictionary is used to describe the metadata that we will use in our database for S.W.I.F.T. The information we will keep track of are data name, synonym, what the data is applicable to, data type, data size, description, acceptable input, an example, and notes

| Notes | Example | Acceptable Input | Description | Data Size | Data Type | Applicable to | Synonym | Data Name |
|-----------------|--|---|--|-----------------|-----------|---|-------------------------------------|----------------|
| | AA | ASCII char 32 (space), -, A-Z, a-z, ', ` , ASCII char 128 to ASCII char 165 | Agencies the customers are affiliated with | 1-30 Characters | Varchar | adding a customer to the system, viewing a customer in the system | customers affiliation with agencies | affiliation |
| Min:0 Max:99 | 2 | 0 through 9 | Count of bags/boxes donated by the donor | 2 Digits | Integer | adding donation to the inventory | Bag/box count of donation | box_count |
| | 555 Anystreet Drive, Albany, NY, 12206 | ASCII char 32 (space), -, A-Z, a-z, ', ` , ASCII char 128 to ASCII char 165 | Customer's current address | 1-70 Characters | Varchar | Adding Customer to system, viewing customer in system | Customer's current address | cust_address |
| | Joe | ASCII char 32 (space), -, A-Z, a-z, ', ` , ASCII char 128 to ASCII char 165 | Customers first name | 1-30 characters | Varchar | Adding Customer to system, searching for customer within system | Customer First Name | cust_firstname |
| | Smith | ASCII char 32 (space), -, A-Z, a-z, ', ` , ASCII char 128 to ASCII char 165 | Customer's last name | 1-30 Characters | Varchar | Adding Customer to system, searching for customer within system | Customer Last Name | cust_lastname |
| | Bob | ASCII char 32 (space), -, A-Z, a-z, ', ` , ASCII char 128 to ASCII char 165 | Dependent's first name | 1-30 Characters | Varchar | adding customer information to the system, viewing customer in the system | Dependent's first name | dep_firstname |

| Notes | Example | Acceptable Input | Description | Data Size | Data Type | Applicable to | Synonym | Data Name |
|-------|------------|--|--|-----------------|-----------|---|---------------------------------------|--------------------|
| | M | M for Male item, F for Female item | Dependent's Gender | 1 Character | Char | Adding Customer to system, searching for customer within system | Dependent Gender | dep_gender |
| | Smith | ASCII char 32 (space), -, A-Z, a-z, ', ` , ASCII char 128 to ASCII char 165 | Dependent's last name | 1-30 Characters | Varchar | adding customer information to the system, viewing customer in the system | dependent's last name | dep_lastname |
| | Son | ASCII char 32 (space), -, A-Z, a-z, ', ` , ASCII char 128 to ASCII char 165 | The relationship of the dependent to the customer | 1-30 Characters | Varchar | adding customer information to the system, viewing customer in the system | relationship of dependent to customer | dep_relation |
| | Store | ASCII char 32 (space), -, A-Z, a-z, ', ` , ASCII char 128 to ASCII char 165 | The director's first name | 1-30 Characters | Varchar | name stamp on entered information | director's first name | director_firstname |
| | Director | ASCII char 32 (space), -, A-Z, a-z, ', ` , ASCII char 128 to ASCII char 165 | The director's last name | 1-30 Characters | Varchar | name stamp on entered information | director's last name | director_lastname |
| | donationS2 | Password must be 6-12 characters long, must contain a number, and capital letter | The director's password so they can log into S.W.I.F.T. | 6-12 Characters | Varchar | login and logout | director's password | director_password |
| | director | | The director's user name so they can log into S.W.I.F.T. | 1-30 Characters | Varchar | login and logout | director's username | director_username |

| Notes | Example | Acceptable Input | Description | Data Size | Data Type | Applicable to | Synonym | Data Name |
|---|--|---|---|-----------------|-----------|--|-----------------------------------|-----------------|
| Value in Dollars and cents, must be proper decimal format | 123.45 | 0 through 9 and '.' | The monetary value of donation | 5 Digits | Float | adding donation to the inventory | Monetary value of donation | donation_value |
| Weight in pounds | 12.55 | 0 through 9 and '.' | The amount the bags/boxes donated weigh | 5 Digits | Float | adding donation to the inventory | Weight of bag/boxes from donation | donation_weight |
| | 555 Anystreet Drive, Albany, NY, 12206 | ASCII char 32 (space), -, A-Z, a-z, ', `', ASCII char 128 to ASCII char 165 | Donor's address | 1-70 Characters | Varchar | adding donor to the system, viewing donor in the system, creating receipts | Donor's address | donor_address |
| | Fred | ASCII char 32 (space), -, A-Z, a-z, ', `', ASCII char 128 to ASCII char 165 | Donor's first name | 1-30 Characters | Varchar | adding donor to the system, viewing donor in the system, creating receipts | Donor's first name | donor_firstname |
| | Johnson | ASCII char 32 (space), -, A-Z, a-z, ', `', ASCII char 128 to ASCII char 165 | Donor's last name | 1-30 Characters | Varchar | adding donor to the system, viewing donor in the system, creating receipts | Donor's last name | donor_lastname |
| Standard US 10 digit phone number | 518-555-5555 | 0 through 9 and '-' | Donor's phone number | 1-15 Characters | Varchar | adding donor to the system, viewing donor in the system, creating receipts | Donor's phone number | donor_phone |

| Notes | Example | Acceptable Input | Description | Data Size | Data Type | Applicable to | Synonym | Data Name |
|-------------------------------------|----------------------------|--|---|-----------------|-----------|--|---|---------------|
| Color, Gender, Article of clothing | black men's suit jacket | ASCII char 32 (space), -, A-Z, a-z, ' , ` , ASCII char 128 to ASCII char 165 | Describes the item | 1-60 Characters | Varchar | adding donation to the inventory | desription of item | item_desc |
| | Women's pants, men's shirt | M for Male item, F for Female item | Keeps track of the gender the item is for | 1 Character | Char | Adding donation to the inventory | Keeps track of the gender the item is for | item_gender |
| Min:0 Max:99 | 4 | 0 through 9 | Count of the number of items | 2 digits | Integer | adding donation to the inventory | number of items | item_quant |
| | 14:24 11/09/20 14 | 0 through 9, '/', and ':' | The time and date the information was input | 16 Characters | Varchar | checking out the customer, creating customers and donors | timestamp for entered information | timestamp |
| | Ed | ASCII char 32 (space), -, A-Z, a-z, ' , ` , ASCII char 128 to ASCII char 165 | Volunteer's first name | 1-30 Characters | Varchar | creating volunteer accounts, name stamp on entered information | volunteer's first name | vol_firstname |
| | Jones | ASCII char 32 (space), -, A-Z, a-z, ' , ` , ASCII char 128 to ASCII char 165 | Volunteer's last name | 1-30 Characters | Varchar | creating volunteer accounts, name stamp on entered information | volunteer's last name | vol_lastname |
| | Donation s8 | Password must be 6-12 characters long, must contain a number, and capital letter | The password for a volunteer so they can log into S.W.I.F.T. | 6-12 Characters | Varchar | creating volunteer accounts, login and logout | volunteer's password | vol_password |
| Will be first initial and last name | ejones | Volunteer's first initial, followed by their last name | The user name for a volunteer so they can log into S.W.I.F.T. | 1-30 Characters | Varchar | creating volunteer accounts, login and logout | volunteer's username | vol_username |

10. Prototypes

11. Pseudocode

We have provided the following pseudo code for four main functions of S.W.I.F.T. These pseudo code functions lay out what these functions logically do, while making it easy to read and understand before translating it into actual code.

11.1. Function: Login

- Get the username typed by the user
- Get the password typed by the user
- Check both username and password in mysql database
- If username and password do not match
 - Print out invalid username and password error message
- If username matches but password does not match
 - Print out invalid password error message
- If username does not match but password does match
 - Print out invalid username error message
- If both match
 - Start session and go to default redirect after login

11.2 Function: Search Customer

- Get the search from customer page
- Convert criteria to sql and search in mysql database
- If there are results to display
 - Display them
- If there are no results
 - Display message telling the user there are no results

12. Testing Plan

12.1. Overview and Strategy

SMARK Solutions is working to create an application that goes above and beyond the expectations of the clients, Dr. Fryling, and Dr. Lim. S.W.I.F.T. is a web-based application, therefore it will be tested to ensure compatibility with all major web browsers. These browsers include Apple Safari, Mozilla Firefox, Google Chrome, and Internet Explorer. Along with this capability, we will test our application by using a number of test cases designed to ensure our application correctly accepts information, and then does not accept the information that is not designed to enter the database. In this section, you will find our test cases, along with our acceptance test. Actual results are not included in this document, as they will be entered in our Detailed Design document, which will be written during the spring semester.

The best and most efficient solutions possible will be created to help solve our client's problems. Together we can be intuitive, be efficient, be SMARK.

12.2. Acceptance Test

Each of the following major functional processes will have test cases created designed to test all of the individual aspects our S.W.I.F.T. to make sure that S.W.I.F.T. works the way it is designed to. Based on the results of these test cases, SMARK Solutions will come together to decide whether or not the program is acceptable to deploy for client use.

12.3. Unit Tests

The following unit tests are tests that will be run to ensure that our application is working properly. Each test will test an individual aspect of one of the major processes to show what inputs will work and and what ones will not/should not work. Following these individual unit tests, a final test will be run to ensure each of the processes will integrate together correctly, allowing our application to do its designed job.

12.3.1. Test Cases

Each of the Unit Tests is made up of a series of test cases. In each case, there are specific guidelines in how to properly test the functionality of the process being tested. Each case also contains information about how the application should respond when each input is entered both before and after the input is processed. If the system responds how it is supposed to according to the case, then the system will be considered to be functional.

12.3.2. Unit Test: Login

| Test Date | Tested By | Comments | Observed result | Expected result | State Before Test | Steps to be Executed | Action to perform test (input) | Description | Test Number | Pass/Fail Status |
|-----------|-----------|----------|-----------------|-----------------|-------------------|---|---|--|-------------|------------------|
| | | | | failed login | login form | click login with null fields | pass null username and passwords | Null username Null password | 1.001 | |
| | | | | failed login | login form | click login with a username but not a password | pass a username and null a password | Not Null username Null password | 1.002 | |
| | | | | failed login | login form | click login with a username but not a password | pass a null username and a password | Null username Not Null Password | 1.003 | |
| | | | | failed login | login form | click login with random username and password | pass a username and password that isnt a user | Not Null username Not Null password | 1.004 | |
| | | | | failed login | login form | click login with a random username but valid password | pass invalid username with a correct password | Incorrect username | 1.005 | |
| Test Date | Tested By | Comments | Observed result | Expected result | State Before Test | Steps to be | Action to perform test | Description | Test Number | Pass/Fail Status |

| | | | | | Test | Executed | (input) | | | |
|--|--|--|--|---|------------|--|---|-------------------------|-------|--|
| | | | | failed login | login form | click login with an existing username but incorrect password | pass valid username with a incorrect password | Incorrect password | 1.006 | |
| | | | | accepted login, redirect to director home page | login form | login with director credentials | pass director username and correct password | Correct director login | 1.007 | |
| | | | | accepted login, redirect to volunteer home page | login form | login with volunteer credentials | pass volunteer username and correct password | Correct volunteer login | 1.008 | |

12.3.3. Unit Test: Add Customer

| Test Date | Tested By | Comments | Observed result | Expected result | State Before Test | Steps to be Executed | Action to perform test (input) | Description | Test Number | Pass/Fail Status |
|-----------|-----------|----------|-----------------|--|----------------------|---|---|-------------------|-------------|------------------|
| | | | | First Name Added to Database | Create Customer Form | Enter First Name in form | Add Valid First Name | ValidFirstName | 1.001 | |
| | | | | Last Name Added to Database | Create Customer Form | Enter Last Name in Form | Add Valid Last Name | ValidLastName | 1.002 | |
| | | | | Address Added to Database | Create Customer Form | Enter Address consisting of the customer's full street address, must be under 70 characters | Add Valid Address Information | ValidAddress | 1.003 | |
| | | | | Dependent's First Name Added to Database | Create Customer Form | Enter Dependent First Name in Form | Add Dependent First Name | ValidDepFirstName | 1.004 | |
| | | | | Dependent's Last Name Added to Database | Create Customer Form | Enter Dependent Last name in Form | Add Dependent Last Name | ValidDepLastName | 1.005 | |
| | | | | Dependent's Relation Added to Database | Create Customer Form | Enter Dependent's Relation to customer in Form | Add dependent Relation to customer | ValidDepRelation | 1.006 | |
| | | | | Dependent Gender Added to Database | Create Customer Form | Enter Dependent Gender into Form | Add Valid Dependent Gender, only adds if dependents exist | ValidDepGender | 1.007 | |
| Test Date | Tested By | Comments | Observed result | Expected result | State Before Test | Steps to be Executed | Action to perform test (input) | Description | Test Number | Pass/Fail Status |

| | | | | | | | | | | |
|--|--|--|--|-------|----------------------|--------------------|------------------------|-------------|-------|--|
| | | | | Error | Create Customer Form | Pass Null Value In | Add Invalid First name | NoFirstName | 1.008 | |
| | | | | Error | Create Customer Form | Pass Null Value In | Add Invalid Last name | NoLastName | 1.009 | |
| | | | | Error | Create Customer Form | Pass Null Value In | Add Invalid Address | NoAddress | 1.010 | |

12.3.4. Unit Test: Search Customer

| Test Date | Tested By | Comments | Observed result | Expected result | State Before Test | Steps to be Executed | Action to perform test (input) | Description | Test Number | Pass/Fail Status |
|-----------|-----------|----------|-----------------|--|-------------------|---|---|-----------------|-------------|------------------|
| | | | | Return Customer's information | Search Page | Enter customer's name into search input | Enter a customer first name or last name that meets the criteria stated in the add customer test | ValidCustName | 1.001 | |
| | | | | Error Returned | Search Page | Enter invalid customer name into search input | Enter a customer first name or last name that does NOT the criteria stated in the add customer test | InvalidCustName | 1.002 | |
| | | | | Return Customer names that include this letter | Search Page | Enter Letter in search | Enter a single alphabetical letter in search bar | SingleLetter | 1.003 | |

12.3.5. Unit Test: Checkout

| Test Date | Tested By | Comments | Observed result | Expected result | State Before Test | Steps to be Executed | Action to perform test (input) | Description | Test Number | Pass/Fail Status |
|-----------|-----------|----------|-----------------|--|-------------------|--|--|------------------|-------------|------------------|
| | | | | Add Customer Name to Checkout Form, Customer's address will be added from database to Form, Recent History will show items recently bought | Checkout Form | Enter customer's name into form | Customer is in the database and must abide by the restrictions stated in the Data Dictionary | ValidCustName | 1.001 | |
| | | | | Item Added to Checkout Form | Checkout Form | Enter item into input on checkout form | Add an item that is currently in the database | ValidItem | 1.002 | |
| | | | | Error | Checkout Form | Enter item into input on checkout form | Add an item that is not currently in the database | InvalidItem | 1.003 | |
| | | | | Error | Checkout Form | Enter item into input on checkout form | Add Item when the history includes more than 8 items in the last 30 days | ItemLimitReached | 1.004 | |

| Test Date | Tested By | Comments | Observed result | Expected result | State Before Test | Steps to be Executed | Action to perform test (input) | Description | Test Number | Pass/Fail Status |
|-----------|-----------|----------|-----------------|-----------------|-------------------|----------------------|--------------------------------|-------------|-------------|------------------|
| | | | | Customer | Checkout | Click View | Click View | ViewHistory | 1.005 | |

| | | | | | | | | | | |
|--|--|--|--|--|---------------|--------------------------------|--------------------------------|------------------|-------|--|
| | | | | 's history of items bought is shown | Form | Full History Item | History Button | | | |
| | | | | Customer's Profile is Shown | Checkout Form | Click Full Customer Profile | Click Full Customer Profile | ViewProfile | 1.006 | |
| | | | | Items on page will be removed from the item inventory table, Customer History is updated with new items just purchased | Checkout Form | Click Complete Checkout Button | Click Complete Checkout Button | CompleteCheckout | 1.007 | |
| | | | | User will be brought back to main landing page | Checkout Form | Click Main Menu Button | Click Main Menu Button | MainMenu | 1.008 | |

12.3.6. Unit Test: Record Donation

| Test | Tested | Comments | Observe | Expected | State | Steps to be | Action to | Description | Test | Pass/Fail |
|------|--------|----------|---------|----------|-------|-------------|-----------|-------------|------|-----------|
|------|--------|----------|---------|----------|-------|-------------|-----------|-------------|------|-----------|

| Date | By | | d result | result | Before Test | Executed | perform test (input) | | Number | Status |
|-----------|-----------|----------|-----------------|-------------------------------------|-------------------|---|---|------------------|-------------|------------------|
| | | | | Add Donor Name to Checkout Form | New Donation Form | Enter donor name into form | Donor is in the database and must abide by the restrictions stated in the Data Dictionary | ValidDonorName | 1.001 | |
| | | | | Item Added to Database | New Donation Form | Enter item into input on form | Add an item to the database | ValidItemName | 1.002 | |
| | | | | Item description Added to Database | New Donation Form | Enter item description into input on form | Add an item's description | ValidItemDescp | 1.003 | |
| | | | | Item gender added to database | New Donation Form | Enter item gender into input on form | Add an item's gender | ValidItemGender | 1.004 | |
| | | | | Error | New Donation Form | Enter item into input on form | Add an item name that is too long | InvalidItemName | 1.005 | |
| | | | | Error, prompt user to add new donor | New Donation Form | Enter donor into input on form | Add donor not in the system | InvalidDonor | 1.006 | |
| | | | | Error | New Donation Form | Enter null value into input on form | Add null value as donor name | NullDonorName | 1.008 | |
| | | | | Error | New Donation Form | Enter null value into input on form | Add null value as item name | NullItemName | 1.009 | |
| | | | | Error | New Donation Form | Enter item description into input on form | Add an item's description that is the wrong length | InvalidItemDescp | 1.010 | |
| Test Date | Tested By | Comments | Observed result | Expected result | State Before Test | Steps to be Executed | Action to perform test (input) | Description | Test Number | Pass/Fail Status |
| | | | | Error | New Donation | Enter null value into | Add a null value as item | NullItemDescp | 1.011 | |

| | | | | | Form | input on form | description | | | |
|--|--|--|--|----------------------------------|-------------------|--------------------------------------|--|-------------------|-------|--|
| | | | | Error | New Donation Form | Enter item gender into input on form | Add an item's gender that is not either M, F, or U | InvalidItemGender | 1.012 | |
| | | | | Error, prompt user to add gender | New Donation Form | Enter null value into input on form | Add a null value as item gender | NullItemGender | 1.013 | |

12.3.7. Unit Test: Edit Customer/Donor

| Test Date | Tested By | Comments | Observed result | Expected result | State Before Test | Steps to be Executed | Action to perform test (input) | Description | Test Number | Pass/Fail Status |
|-----------|-----------|----------|-----------------|----------------------------------|----------------------|---|--------------------------------|------------------|-------------|------------------|
| | | | | New First Name Added to Database | Create Customer Form | Enter First Name in form | Edit Valid First Name | EditFirstName | 1.001 | |
| | | | | New Last Name Added to Database | Create Customer Form | Enter Last Name in Form | Edit Valid Last Name | EditLastName | 1.002 | |
| | | | | New Address Added to Database | Create Customer Form | Enter Address consisting of the customer's full street address, must be under 70 characters | Edit Valid Address Information | EditAddress | 1.003 | |
| Test Date | Tested By | Comments | Observed result | Expected result | State Before Test | Steps to be Executed | Action to perform test (input) | Description | Test Number | Pass/Fail Status |
| | | | | New Dependence | Create Customer | Enter Dependent | Edit Dependent | EditDepFirstName | 1.004 | |

| | | | | | | | | | | |
|--|--|--|--|---|----------------------|--|-------------------------------------|-----------------|-------|--|
| | | | | nt's First Name Added to Database | Form | First Name in Form | First Name | | | |
| | | | | New Dependent's Last Name Added to Database | Create Customer Form | Enter Dependent Last name in Form | Edit Dependent Last Name | EditDepLastName | 1.005 | |
| | | | | New Dependent's Relation Added to Database | Create Customer Form | Enter Dependent's Relation to customer in Form | Edit Dependent Relation to customer | EditDepRelation | 1.006 | |
| | | | | New Dependent Gender Added to Database | Create Customer Form | Enter Dependent Gender into Form | Edit Valid Dependent Gender | EditDepGender | 1.007 | |

12.3.8. Unit Test: Add Volunteer

| Test | Tested | Comment | Observed | Expecte | State | Steps to be | Action to | Description | Test | Pass/Fail |
|------|--------|---------|----------|---------|-------|-------------|-----------|-------------|------|-----------|
|------|--------|---------|----------|---------|-------|-------------|-----------|-------------|------|-----------|

| Date | By | s | result | d result | Before Test | Executed | perform test (input) | | Number | Status |
|------------------|------------------|-----------------|------------------------|--------------------------------------|--------------------------|--|---------------------------------------|----------------------|--------------------|-------------------------|
| | | | | First Name Added to Database | Create Volunteer Form | Enter First Name in form | Add Valid First Name | ValidFirstName | 1.001 | |
| | | | | Last Name Added to Database | Create Volunteer Form | Enter Last Name in Form | Add Valid Last Name | ValidLastName | 1.002 | |
| | | | | Username Added to Database | Create Volunteer Form | Enter username consisting of first initial and last name into form | Add Valid username | ValidUsername | 1.003 | |
| | | | | Temporary Password Added to Database | Create Volunteer Form | Password containing at least one capital letter and one number | Add Valid Temporary Password | ValidPassword | 1.004 | |
| | | | | Error | Create Volunteer Form | Pass Null Value In | Add Invalid First name | NoFirstName | 1.005 | |
| | | | | Error | Create Volunteer Form | Pass Null Value In | Add Invalid Last name | NoLastName | 1.006 | |
| | | | | Error | Create Volunteer Form | Pass Null Value In | Add Invalid Username | NoUsername | 1.007 | |
| | | | | Error | Create Volunteer Form | Type in username using incorrect formatting | Add Invalid Username | WrongFormat Username | 1.008 | |
| Test Date | Tested By | Comments | Observed result | Expected result | State Before Test | Steps to be Executed | Action to perform test (input) | Description | Test Number | Pass/Fail Status |
| | | | | Error | Create Volunteer | Pass Password | Add Invalid Password | PasswordTooShort | 1.009 | |

| | | | | | | | | | | |
|--|--|--|--|-------|------------------------------|--|-------------------------|------------------------|-------|--|
| | | | | | Form that is too short | | | | | |
| | | | | Error | Create Volunteer Form | Pass Password that is too long | Add Invalid Password | PasswordTooL ong | 1.010 | |
| | | | | Error | Create Volunteer Form | Pass password that is all letters | Add Invalid Password | AllLettersPass word | 1.011 | |
| | | | | Error | Create Volunteer Form | Pass Password That is all Numbers | Add Invalid Password | AllNumPasswo rd | 1.012 | |
| | | | | Error | Create Volunteer Form | Pass Password That is all lowercase | Add Invalid Password | LowercasePas sword | 1.013 | |

12.3.9 System Test

System testing will be conducted on S.W.I.F.T. to ensure our application meets all of the set requirements, both functional and non-functional. We will use black box testing to make sure the application behaves as it should. This means that when various inputs are entered in, such as new

users and new inventory items, certain outputs should or should not be seen, ensuring our application works properly.

12.3.10 Integration Test

Integration testing will be conducted on S.W.I.F.T. to ensure each of the different components of the application interact as they should with all of the other components that make up S.W.I.F.T. . This will be completed through tests built into our unit and system testing to make sure everything works and cooperates properly.

12.3.11 Regression Test

Regression testing conducted on S.W.I.F.T. will take place after completion and in the future as updates and changes are made. This testing will be carried out to make sure any of the new changes or updates do not harm the functionality of the application. For this, both integration tests and the unit tests should be re-run to ensure the application is fully functional.

13. Development and Production Environments

13.1. Development Environment

Windows Computer

Operating System: Windows 7 Enterprise (x64) Service Pack 1

Processor: Intel Core i5-3470 @ 3.20 GHz

Ram: 6GB

HDD Capacity: 499 GB

Macintosh Computer

Operating System: OS X Lion 10.7.5

Processor: Intel Core i5 @ 2.5 GHz

Ram: 4GB

HDD Capacity: 378 GB

13.2. Operating Environment

This information has yet to be determined by the client. This application will be web-based, so it will operate from an off-site server. The application is designed to be as simple and easy to operate as possible, to allow anyone to easily use it.

13.3. Maintenance

Maintaining this application involves ensuring that the information is correct and up-to-date, and making sure that any updates to the server are remain compatible with S.W.I.F.T. as server maintenance is completed by the third party that houses the servers.

14. Appendices

14.1. Appendix C: Glossary of Terms

Gantt Chart - Bar chart typically used to project scheduling

Data Flow Diagram - A visual representation of how data moves throughout a system.

Database - An organized collection of data.

ER Diagram - (Entity-Relationship Diagram) Is a data model of the information of the business domain or process requirements to show how they will be implemented in a database.

Functional Requirements - Defines what the system will be able to do and what is testable about the system.

Non-Functional Requirements - Requirements that are not necessarily specific features that exist in a system, but what the system is intended to do.

Processor - The part of the computer that handles and executes operations.

Prototype - An early sample, model or release of a product built to test a concept.

Pseudocode - Is an informal high-level description of the operating principle of a computer program or other algorithm.

Random Access Memory (RAM) - a memory unit that allows any specific byte to be used randomly at any time.

Relational Schema - Is a model that shows how the database logically groups objects such as tables, views, stored procedures.

Server - a computer or program that manages access to a resource or service in a network.

S.W.I.F.T. - Simple Web Inventory For Tracking

UML Use Case Diagram - A visual representation of the users interaction with the system in a specific instance.

Use Case Narrative - a written explanation of the course of events a user will encounter when interacting with the system

14.2. Appendix D: Timeline

Development Timeline:

| Grassroot Givers | | Start Date: | | September 2, 2014 | | | | | |
|--|------------|-------------|-----------------|-------------------|-----|-----|-----|-----|--|
| SMARK Solutions | | | | | | | | | |
